EDITORIAL PREFACE

"Finally, brethren, whatsoever things are true, whatsoever things are honourable, whatsoever things are just, whatsoever things are pure, whatsoever things are lovely, whatsoever things are of good report; if there be any virtue, and if there be any praise, think on these things."

No section of the population of India can afford to neglect her ancient heritage. In her literature, philosophy, art, and regulated life there is much that is worthless, much also that is distinctly unhealthy; yet the treasures of knowledge, wisdom, and beauty which they contain are too precious to be lost. Every citizen of India needs to use them, if he is to be a cultured modern Indian. This is as true of the Christian, the Muslim, the Zoroastrian as of the Hindu. But, while the heritage of India has been largely explored by scholars, and the results of their toil are laid out for us in their books, they cannot be said to be really available for the ordinary man. The volumes are in most cases expensive, and are often technical and difficult. Hence this series of cheap books has been planned by a group of Christian men, in order that every educated Indian, whether rich or poor, may be able to find his way into the treasures of India's past. Many Europeans, both in India and elsewhere, will doubtless be glad to use the series.

The utmost care is being taken by the General Editors in selecting writers, and in passing manuscripts for the press. To every book two tests are rigidly applied: everything must be scholarly, and everything must be sympathetic. The purpose is to bring the best out of the ancient treasuries, so that it may be known, enjoyed, and used.

THE DEVELOPMENT AND LITERARY HISTORY OF THE KARMA-MIMĀMSĀ

Not rarely in the Brāhmaṇas, especially in later texts like the Kauṣītaki, the term Mimāṃsā occurs as the designation of a discussion on some point of ritual practise. The sacrifice left innumerable opportunities for divergence of usage in detail, and the texts decide in favour of one or the other alternative, on the strength of the reasons familiar to the Brāhmaṇas, in special the symbolical significance attaching to the action recommended. There is a vital difference between this form of Mimāṃsā and that of the classical Karma-Mimāṃsā school, in the fact that in the former the appeal to authority, and the necessity of reconciling apparent discrepancies of authority, are entirely lacking. But the tendency to surrender judgment in favour of tradition may be traced in the care with which in the Śatapatha and the Kauṣītaki Brāhmaṇas the name of the teacher is adduced in support of the doctrines expounded; in the older style the reasonings stand by themselves, commended by their intrinsic value.

The process by which the Brāhmaṇas came to be regarded as texts of incontrovertible accuracy, and speculation on the sacrifice ceased to be independent, cannot now be traced in detail. The account of the sacrifices given in these texts, supplemented by the collections of Mantras in the Samhitās of the various schools, would, obviously, never have sufficed to enable priests to carry out the sacrifices, and there must have been a full and precise oral tradition regarding the mode in which the sacrifices, which formed the subjects of the mystical speculations of the Brāhmaṇas, were to be performed. This tradition, however, in the course of time
seems to have become obscured, just as the tradition of the interpretation of the Mantras fell into confusion, and in its place in some degree supervened an attempt, on the ground of reasoning, to deduce from the Samhitās and the Brāhmaṇas, taken together, rules for the regulation of the performance of the offerings. The difficulties of such a course were considerable; there are real divergences between the Samhitās and the Brāhmaṇas, which we may justly attribute to change of ritual, but which in the opinion of the priests admitted of other explanations. Thus, in some cases, the order of the Mantras is patently different from the order of actions contemplated in the Brāhmaṇas, a divergence which the new Mīmāṃsā decided in favour of the order of the Mantras on the ground that, as they were recited in the sacrifice they were more directly connected with the sacrifice than the Brāhmaṇas, which were not immediately employed in the offering. With more plausibility, the new doctrine held that if a Brāhmaṇa mentioned an action out of its natural order, such as the cooking of the rice grains before the husking, it was nevertheless to be assumed that the normal sequence was to be followed. More legitimately still, the new science devoted itself to such problems as the determination of the person by whom the several actions enjoined, without specification of the actor, fell to be performed; the connection as principal and subordinate of the many details of the offering; and the precise mode of performance of the Vikṛtis, or derivative forms of the main sacrifices, the particulars of which are seldom adequately indicated in the sacred texts.

The antiquity of the new science is vouched for by the Dharma Sūtras. Āpastamba in two passages\(^1\) disposes of contested points by the authority of those who know the Nyāya, a term which is the early designation of the Karma-Mīmāṃsā and persists through its history in its generic sense of "reasoning," while the Nyāya philosophy proper borrows it, and applies it more specifically to denote the syllogism. What is still more convincing is that Āpastamba

---

\(^1\) Bühler, *Sacred Books of the East*, II, xxviii, xxix; XXV, xlvi, lii.
uses arguments which are to be found in the Mimāṁsā Sūtra; thus he maintains that no text can be inferred from a custom for which a secular motive is apparent, and that a revealed text has superior validity to a custom whence a text might be inferred. The corresponding rules in the Mimāṁsā Sūtra (I, 3, 3-4) do not textually agree, and we may fairly conclude that at this date, probably not later than the middle of the third century B.C., the Sūtra did not exist in its present form, but it is plain that the science itself was in full vogue, and a Mimāṁsāka appears to have been deemed a necessary member of a Pariśad. The influence of this discipline can plainly be discerned in the existing Sūtra texts; the works of Āśvalāyana, Śāṅkhāyana, Āpastamba, Hiranyakesin, Laṭyāyana, and Drāhyāyaṇa have been composed under its influence, and the same consideration applies even to texts like those of the Baudhāyana and Mānava schools, which show greater affinities to the Brāhmaṇa style. We need not, of course, assume that the old sacrificial tradition was entirely lost, but we may be certain that it has been largely transformed in the process of remodelling.

Simultaneously with the remodelling of the Sūtras, there must have proceeded the definition of the rules of interpretation until they were finally codified in the Mimāṁsā Sūtra,\(^1\) which passes under the name of Jaimini, but the details of this process must remain unknown to us. What is certain is that the Mimāṁsā Sūtra presupposes a long history of discussion, and that its aphorisms, which often assume, without expressing, general rules of interpretation, deal largely with difficulties affecting individual Vedic texts, which had long been the subject of dispute. This characteristic is shown clearly in the mode of discussion followed in the text; the essential subdivision is the Adhikaraṇa, which, according to the school, is to be deemed to fall into five parts; these Mādhava reckons as the subject of investigation (viṣaya), the doubt (samśaya), the first or prima facie view (pūrva-paṭka), the

\(^1\) Edited, Bibliotheca Indica, 1873-1889; trans. of Adhyāyas I-III, by Gaṅgānātha Jhā, Sacred Books of the Hindus, vol. X.
answer or demonstrated conclusion (*siddhānta*), and the relevance of the topic (*saṃgati*), but the last head is elsewhere reckoned as the third, and a more natural division\(^1\) omits it, and regards as the fourth and fifth members the answer (*uttarapakṣa*), and the conclusion (*nirṇaya*). Thus in the first Sūtra of the text there are two Adhikaraṇas; is the study of the Veda necessary for the three upper castes, and is Dharma a proper subject of study? The latter alone needs full discussion, the reply to the former being self-evident. The subject then is formed by the two Vedic precepts, “One should study the Veda,” and “One should perform the final bath after studying the Veda.” The doubt is whether one should, after learning the Vedic text, perform the bath and end one’s studentship, or remain longer with the teacher to study Dharma. The *prima facie* view is that the bath should follow immediately on the learning of the text, but the reply is that real study of the Veda is not satisfied by mere reading of the text, and the conclusion, therefore, is that the final bath is to be postponed for a time in order that the student may complete his learning of the text by a study of Dharma. Of all this, however, the Sūtra itself has nothing, consisting merely of the words, “Now, therefore, an enquiry into Dharma,” and, though in some cases there is more full development of an Adhikaraṇa, it is to the commentators that we must look for enlightenment on the exact issues in dispute. It is not, of course, to be supposed that at any time the Sūtra was handed down without oral explanation, but, as usual, the authentic version was early obscured.

Of these Adhikaraṇas there are in the Sūtra in Mādhava’s reckoning about 915, divided into twelve books with sixty Pādas, the third, sixth, and tenth having eight each in lieu of the normal four, and 2,652 aphorisms (2,742 in another reckoning). Jaimini is the chief authority cited, but mention is made also of other names, such as those of Bādari, Āstreya, and Bādarāyana, who occur also in the *Vedānta Sūtra*, and of Lābukāyana, Aitaśāyana, etc. Who Jaimini was we cannot say. A Jaimini is credited with the author-

\(^1\) Cowell in Colebrooke, *Essays I*, 326.
ship of a Śrauta and a Grhya Sūtra, and the name occurs in lists of doubtful authenticity in the Āṣvalāyana and Śāṅkhāyana Grhya Sūtras; a Jaiminīya Samhitā and a Jaiminīya Brāhmaṇa of the Sāma Veda are extant. As an authority on philosophy Jaimini appears in the Vedānta Sūtra and often in later works,¹ but it is significant that, while it is possible that the Mahābhārata recognises the existence of the Mimāṁsā it does not refer to Jaimini as a philosopher, but merely as an ancient sage.² Neither Buddhist or Jain literature throws light on his personality or date, and the period of the Sūtra·can be determined, therefore, merely on grounds of comparison of its contents with those of other works.

It is probable that the Mimāṁsā Sūtra is the earliest of the six Darśanas preserved to us. The Yoga Sūtra is not an early work; it seems to recognise the Vijñānavāda school of Buddhism, which, in all probability, belongs to the fourth century A.D., and the popular identification of Patañjali with the author of the Mahābhāṣya is clearly untenable.³ The lateness of the Sāmkhya Sūtra is admitted, and the theory that its contents include early matter has been controverted. The Vaiśeṣika Sūtra has no point of contact with the Mimāṁsā such as would render any conclusion possible, but the Nyāya Sūtra (II, 1, 61) is familiar with the Mimāṁsā terminology, and it is improbable that, had the Nyāya existed before the Mimāṁsā Sūtra took form, it would have been ignored by the latter as it is. The relation to the Vedānta Sūtra is less clear; the mention of Jaimini and Bādarāyaṇa in both texts affords some ground for the view that the two works were simultaneously redacted, but this conclusion is by no means assured. We have no valid reason for assuming that the Sūtras were actually redacted by Jaimini and Bādarāyaṇa themselves,

¹ His death, caused by an elephant, is recorded in Pañcatantra II, 34, but not in the Tantrākhyāyika. The name is strange, but is ignored in Pāṇini and the Mahābhāṣya, which, however, knows of Mimāṁsakas, probably adherents of this school (Indische Studien, XIII, 455, 466).
² Hopkins, Great Epic of India, p. 97.
³ Sāmkhya System, pp. 56, 57.
and, unless this is established, the argument for contemporaneity is invalid. It is true that it is impossible to deduce from the style of the Mimāṃsā as Pūrva-Mimāṃsā a relation of temporal priority for Jaimini's work; the Mimāṃsā is prior to the Vedānta because it deals with the sacred rites, the knowledge of which, in the view of one school of Vedānta, is an indispensable preliminary to the knowledge of the absolute, though Śaṅkara declines to accept this view and insists instead on the diverse character of the ends of the two disciplines, which renders it impossible to treat the former as the normal or necessary prelude to the latter. ¹ Nonetheless it remains true that we must assume that the Mimāṃsā as a science developed before the Vedānta.² The former was plainly necessitated by the development of the sacrificial ritual with which it is immediately connected, and it serves an important practical end; the latter is proof of the growth of a philosophical spirit, which sought to comprehend as a whole the extremely varied speculations which are scattered in the Āranyakas and Upaniṣads. While, of course, it is not impossible that the redaction of the two Sūtras was contemporaneous, despite the earlier development of the Mimāṃsā, the probability surely lies in favour of the view that the Mimāṃsā Sūtra was redacted first and served as a model for the other schools.

Even if this view is accepted, it remains difficult to assign any definite date to the Sūtra. It contains no certain reference to Buddhist tenets of any kind, for the term buddha, in I, 2, 33, has not this signification, and we need not with Kumārila read a reference to Buddhism into I, 3, 5, and 6. The Vedānta Sūtra is of uncertain date; if we believe Śaṅkara, it criticises (II, 2, 28-32) the Vijñānavāda school of Buddhism, but this doctrine is probably wrong³ and we need see only a reference to the Śūnyavāda of Nāgārjuna. The date of this school is uncertain; if we accept the opinion that it was not enunciated before Nāgārjuna in such a manner as to invite criticism in the

¹ Deussen, Vedānta, ch. I.
² Thibaut, S.B.E., XXXIV, ix ff.

Vedānta Sūtra, that work cannot be earlier than the third century A.D., for Āryadeva, Nāgārjuna's contemporary, refers to the zodiacal signs and the week-days, which were not known in India until that epoch. But it is possible that the Śūnyavāda, which can be recognised in Āsvaghōṣa, was of older fame than Nāgārjuna, though on the whole it is more likely than not that it was the dialectical ability of that teacher which made the doctrine the object of Vedāntic confutation. It is, then, a plausible conclusion that the Mimāṃsā Sūtra does not date after 200 A.D., but that it is probably not much earlier, since otherwise it would have been natural to find in the Mahābhārata some reference to it and to its author.

As we have seen, the Sūtra must from the first have been accompanied by a comment, which in course of time was lost or became defective. The first commentator of whom we have certain knowledge is a Vṛttikāra, from whose work a long extract is made in the Bhāṣya of Śabarāsvāmin on Mimāṃsā Sūtra, I, 1, 5, in which the author attacks and refutes Buddhist views. If we believe Kumārila, the discussion is directed in part against the Vijñānavāda school, in part against the Śūnyavāda, but in this case we have every reason to distrust his assertion, for, plainly by error, he ascribes the major portion of the discussion to Śabarāsvāmin, and not to the Vṛttikāra. It is, therefore, not improbable that he is also in error in finding any reference to the Vijñānavāda, for the passage seems to deal with one topic only, and that the Śūnyavāda. It follows, accordingly, that the date of the Vṛttikāra was probably not later than the fourth century A.D., since, had he lived later, he would hardly have omitted an explicit discussion of the tenets of the idealistic school of Buddhism.

The name of the Vṛttikāra is uncertain. The conjecture\(^1\) that he was Bhavadāsa, mentioned in one place by Kumārila, may be dismissed as wholly without support. The current opinion makes him to be Upāvarṣa, who, we know from Śāṃkara (Vedānta Sūtra, III, 3, 53) wrote on both the texts. To this the objection has been brought that in the passage cited

\(^1\) Gāgānātha Jhā, trans. of Ślokavārttika, p. 116.
from the Vṛttikāra by Śabarāsvāmin there is a reference to Upavarśa with the epithet Bhagavat, implying that he was in the eyes of the Vṛttikāra an author of venerable authority. It is probable, however, that the citation from the Vṛttikāra is only a résumé,¹ not a verbatim quotation, and that Śaharāsvāmin is responsible for the reference² to Upavarśa, the Vṛttikāra’s proper name, and for this view support may be derived from the mode in which the Vṛttikāra and Upavarśa are referred to by Kumārila elsewhere (II, 3, 16). If this view is rejected, it is possible that he is Bodhāyana, who certainly wrote on the Vedānta Sūtra, but this theory is a bare and unnecessary conjecture, seeing that Bodhāyana nowhere else appears as a Mīmāṁsā authority. Of other, presumably early, commentators we hear of Bhartṛmitra² and Hari,³ but there is no reason to identify either of these with the Vṛttikāra.

The extract from the Vṛttikāra proves that an important addition has been made to the teaching of the Mīmāṁsā in the shape of the introduction of discussions of the validity of knowledge and its diverse forms. The Sūtra itself is content with the denial of the validity of perception for the purpose of the knowledge of Dharma, and the exaltation of Vedic injunctions as the source of the necessary knowledge; under the influence, perhaps, of the Nyāya the earlier doctrine is now elaborated into a critical examination of the nature of evidence, its validity, and the forms of proof. It is not illegitimate to assume that the Vṛttikāra indulged also in metaphysical discussions; at any rate Śabarāsvāmin enters into a long discussion of the nature of soul, despite his predilection for brevity in treatment of the Sūtra. The Mīmāṁsā therefore by this time enters into the whole field of philosophy, while maintaining its primary duty of expounding the rules by which the ritual can be reconstructed from the Brāhmaṇas and the Śamhitās.

¹ In II, 3, 16, he clearly describes the Vṛttikāra as bhagavān ācāryah; cf. III, 1, 6. These passages Jacobi has overlooked.
² Pārthasārathi on Ślokavārttika, p. 4 (v. 10); he is cited on the organ of sound, Nyāyamaṇjarī, p. 213.

*Fair usage policy applies
Brhati has enabled us to correct this error. Prabhākara follows Śabarāsvāmin closely; he does not refute the opinions of Kumārila; in one passage (IV, 1, 2), when he does criticise an opinion of the latter, the form of words used by him in adducing it differs entirely from those in which the view of Kumārila is expressed, showing clearly that he is dealing with some older author, whom Kumārila has followed. On the other hand, Kumārila frequently diverges from the views of the Bhāṣya; he criticises (I, 2, 31 ; 3, 2 ; 4, 1) views which are expressed by Prabhākara, and asserts independent views. There is a clear difference of style between the two authors; Prabhākara is comparatively simple, vivid and direct like Saharāsvāmin; he seldom uses long compounds; he avoids the combination of various reasonings in a single clause; in lieu of the formal terminology of objection and reply (nanu ... ced, na or syād etat ... tad ayuktam) he adopts the form of question and answer, which, however, has the disadvantage of leaving at times the meaning in doubt. In all these aspects Kumārila shows a richer, more varied, and elaborated style, which is reminiscent of the Śārīra-bhāṣya of Śaṅkara.

Kumārila’s great exposition of the Śabarabhāṣya falls into three parts, the first, the Ślokavārttika,¹ in verse, deals with Pāda I of Adhyāya I of the Bhāṣya, and is of the greatest value as an explanation of the metaphysics and epistemology of his system. The second, the Tantravārttika,² covers the remaining three Pādas of Adhyāya I and the whole of Adhyāyas II and III. The third part, the Tūṭīkā, consists merely of scattered notes on the last nine Adhyāyas. Each part has been commented on; the first by Pārthasārathi Miśra in his Nyāyaratnākara, and by Sucarita Miśra in his Kāśikā; the second by Someśvara, son of Mahādeva, in his Nyāyasudhā or Rāṇaka; the third by Veṅkaṭēśvara Dikṣita in his Vārttikābharāṇa. Kumārila’s date is determinable within definite limits;³ he used the

Vākyapadiya of Bhaṭṭhṇarā; neither Hiuen-Thṣang nor Ī-tṣing mentions him; he was before Śaṃkara; he attacked the Jain theory of an omniscient being as propounded in the Āptamimāṇsā of Samantabhadra, but is not answered by Akalaṅka in his Aṣṭasatī, which comments on the Āpta-mimāṇsā. On the other hand, he is freely attacked by Vidyāṇanda and Prabhācandra, who both lived before 838 A.D. Vidyāṇanda assures us, doubtless correctly, that he criticised the Buddhist Dharmakīrti, and Prabhākara, on the latter point agreeing with the result above arrived from internal evidence. The upper limit of date is, therefore, not earlier than 700 A.D. The lower limit depends on his precise chronological relation to Śaṃkara and the latter's exact date. Later tradition, the Śaṃkaravijayasya of Madhava and the pseudo-Ānandagiri, would make him an older contemporary, but the interval may have been considerably longer.

Only slightly later than Kumārila was Maṇḍana Miśra, author of the Vidhīviveka, a treatise on the significance of injunctions, and the Mīmāṃsānukramaṇi, a summary of Śabarāsvāmin's Bhāṣya. The tradition of the Śaṃkaravijayasya makes him out to be identical with Suresvara, a pupil of Śaṃkara, but Ānandagiri's account insists that he was also a pupil of Kumārila. The identification with Suresvara, which might be suspected because of the lateness and inferior character of the authorities, is to some extent confirmed by Vidyānanda’s description1 of Maṇḍana Miśra as Vedāntavādin, which could hardly apply to him unless he were the author of the works ascribed to Suresvara. His direct connection with Kumārila, however, need not be insisted upon. His lower limit of date is fixed by the fact that the famous Vācaspati Miśra devoted the Nyāyakanikā to the exposition of his Vidhīviveka,2 and Vācaspati probably lived about 850 A.D. He wrote also the Tattvabindu3 on Kumārila’s views.

Of the later writers the most important is perhaps Pārthasārathi Miśra, who wrote the Śāstradīpika4 to explain

1 Ibid. p. 228.
3 Ed. Benares, 1892.
4 Ed. Benares, 1891. He is earlier than Mādhava.
the Sūtra; on it commented, in 1543 A.D., Rāmakṛṣṇa Bhaṭṭa, son of Mādhava, in the Vuktisnehaprapūraṇī, Somanātha, son of Sūra Bhaṭṭa, an Āndhra Brahman of the Niṭṭal family, in his Mayukhamālikā, Vaidyanātha (1710 A.D.), Bhaṭṭa Śaṃkara, Bhaṭṭa Dinakara, Kamalākara, and others. His Tantraratna comments on points in the last nine Adhyāyas of the Sūtra and the Bhāṣya, while his Nyāyaratnamalā¹ is an independent treatise on which Rāmānuja, apparently the great Vedantist, has written a comment, the Nāyakaratna.

Much later in date is Khaṇḍadeva, who died at Benares in 1665 A.D. His works, the Bhāṭṭadīpīkā, and on a larger scale the Mīmāṃsākaustubha,² deal fully with the Sūtra; the former was commented on in 1708 by his pupil Śambhu Bhaṭṭa. Value attaches also to the Mīmāṃsāsūtrakadādhi or Nyāyāvalīdīdhi of Rāghavānanda Sarasvati, pupil of Advaya, pupil of Viśveśvara, and to the Mīmāṃsānaya-viveka of Bhavanātha Miśra, which deals also with Śabara-svāmin. Yet other commentaries are recorded, including works by Mahādeva Vedāntin, Kamalākara and Vaidyanātha, son of Rāmacandra, the Subodhini³ of Rāmeśvara Sūri, the Bhāṭṭacintāmani of Viśveśvara or Gāgā Bhaṭṭa, etc.

Apart from the Sūtra there was developed a considerable literature which aims, as did Maṇḍana Miśra, at dealing systematically with the doctrines of the school. First in importance, perhaps, is the Jaiminīyanyāyamālāvistara⁴ of the famous Mādhava written in the fourteenth century, which, however, is merely a summary in verse, with a prose comment, of the Mīmāṃsā Sūtra. At the end of the sixteenth century Appayya Dīkṣita wrote his Vidhirasāyana,⁵ a disquisition on the nature of injunction, adding himself a commentary, the Sukhopayojinī. This text was refuted by Gopāla Bhaṭṭa in his Vidhirasāyanabhūṣana, and by Śaṃkara Bhaṭṭa in his Vidhirasāyanadūṣana. The same author, who was of the same period as Appayya, wrote

⁴ Ed. London, 1878.
⁵ Ed. Benares 1901.
a commentary on the Śāstradīpikā, and the Mīmāṃsāsāra-
samgraha, in which he enumerates 1,000 Adhikaraṇas,
alloting to each a quarter verse. An extended version
of this work forms his Mīmāṃsābālaprakāṣa, on which there
is a commentary by Keśava, son of Viṣvanātha. Appayya
himself wrote also the Upakramaparākrama, a treatise on
the comparative importance of the commencement and end
of a continuous Vedic passage.

The most popular introduction to the Mīmāṃsā is prob-
bably the Mīmāṃsānyāyaprakāṣa of Āpadeva, son of
Anantadeva, and pupil of Govinda. His date is determined
by the fact that his son, Anantadeva, wrote his Smṛti-
kaustubha under a prince who lived in the middle of the
seventeenth century. Anantadeva commented on his
father’s work in the Bhāṭṭālamkāra, and his brother,
Jivadeva, discussed in the Bhāṭṭabhäskara the divergent
views prevalent in the schools. Even better known,
perhaps, is the Arthasamgraha of Laugāksi Bhāskara,
which seems to be based in part on the work of Āpadeva,
and, if so, must belong to the seventeenth century. This
date would suit adequately the probable period of his
popular Nyāya-Vaiśeṣika treatise, the Tarkakaumudī.
Another short text is the Mīmāṃsāparibhāṣā of Kṛṣṇa
Dikṣita, and the Mīmāṃsāratnā of Raghunātha, who uses
the Kāśikā, contains some information of value on the views
of the opposing schools. Nārāyaṇatīrtha Muni’s Bhāṭṭabhäṣā-
prakāṣa is an exposition of the terminology of the Mīmāṃsā,
while Rāmakṛṣṇa Udīcya Bhāṭṭācārya’s Adhikaraṇakau-
mudī expounds a selection of interesting Adhikaraṇas.
Khaṇḍadeva’s Bhāṭṭarahasya deals with the mode of
determining which is the leading word in a text under
discussion. More interesting is the fact that the famous
Vallabha Ācārya is credited with a Pūrvamīmāṃsākārikā,
an epitome in 42 verses of Jaimini’s views, written with
reference to the doctrine of faith which Vallabha expounded,

and a *Jaiminisūtrabhāṣya* which deals with the first chapter of the second book of the Sūtra. The well-known scholar, Veṅkaṭanātha Vedāntācārya, in his *Mimāṃsāpādukā*, in verse, discusses the Adhikaranaṇas in the first chapter of the first book of the Sūtra, and in his *Sesvaramimāṃsā* seeks to combine the Mimāṃsā with the Vedānta. Another writer from southern India, Veṅkaṭādhvarin, deals with the threefold classification of injunctions in his *Vidhitrayaparitṛāna*, while in his *Mimāṃsāmakaranda* he discusses the authoritative character of Arthavādās. Nārāyaṇa of Kerala, the well-known author of the *Nārāyanīya*, who flourished at the end of the sixteenth century, gives in the first part of the *Mānameyodaya* an account of Kumārila’s views on the nature of proof; he purposed completing his task by adding an account of the same author’s views on the world of reality, but this part of his work was never carried out, and was supplied at a later date by another Nārāyaṇa, who was patronised by Mānadeva, king of Śailābdhi; the work is interesting as showing how far the school of Kumārila went in appropriating the views of the Nyāya-Vaiśeṣika philosophy.

Of the other systems it is the Nyāya, and later the combined school of Nyāya-Vaiśeṣika, which throws the most light on the Mimāṃsā. The *Nyāya Sūtra* deals critically with the Mimāṃsā doctrine of the eternity of the word, and Kumārila and Prabhākara alike appear to have developed their philosophical tenets under the influence of the controversy on logic which took place between the Nyāya school and the Buddhists, especially Dignāga and Dharmakīrti on the other hand; Kumārila attacked both of these writers and was clearly aware of the *Nyāyavārttika* of Uddyotakara, in which the orthodox Nyāya view was set out in refutation of Dignāga’s onslaughts. On the other hand, the Mimāṃsā views are freely disputed in Vācaspati Miśra’s comment on Uddyotakara and in Jayanta Bhaṭṭa’s *Nyāyamaṇjarī*, Varadārāja’s *Tārkikaraksā*, and Udayana’s works, much of the *Kusumāṇjali* being expressly devoted to dealing with Mimāṃsā criticisms of the doctrine of the creation of the

3 *Prakaranapaṅcikā*, pp. 47, 64, discusses Dharmakīrti’s views of perception and inference.
world. The Tattvacintāmaṇi of Gaṅgeśa repeatedly attacks the Mimāṃsā views of the nature and validity of proof, and the controversy is continued in the voluminous literature based on that important text, and in the short text-books of the combined school of Nyāya-Vaiśeṣika. In his commentary on Praśastapāda’s Bhāṣya Śrīdhara, from the point of view of the Vaiśeṣika deals freely with Mimāṃsā views; moreover, the Jain Haribhadra (ninth century) includes in his Saddarśan- asamuccaya, commented on by Guṇaratna, an account of the Mimāṃsā, and there are chapters upon it in the Sarvasiddh- āntasamgraha, falsely ascribed to Śaṅkara, and in Mādhava’s Sarvadarśanasamgraha. The former work deals separately with the doctrines of Prabhākara and Kumārila; it betrays its late character by its attempt to show that Prabhā- kara was the pupil of Kumārila, and by converting the doc- trine of Kumārila into a form of the Vedānta. The work of Mādhava gives a long specimen of the conflicting views of the two schools as to the interpretation of the opening of the Sūtra, and contains an interesting exposition of the arguments for and against the eternity of the Veda, and the self-evidence of cognition.

Jayanta Bhaṭṭa’s work¹ is of special interest, as it is the product of a member of a family skilled in the Mimāṃsā, and its author freely attacks Prabhākara and his followers, and repeatedly cites the Ślokavārttika. The author’s grand- father was confirmed in his faith in the efficacy of sacrifice by obtaining as the result of one offering the village of Gauramūlaka, doubtless from a king of Kashmir, for Jayanta’s great-grandfather, Śaktisvāmin, was a minister of Mukṭāpīda, better known as Lalitāditya. Incidentally Jayanta affords a welcome confirmation of the date of Vācaspati Miṣra, whom he quotes (pp. 120, 312), for, as Lalitāditya’s reign ended about 753 A.D., it is impossible to place Jayanta later than the second half of the ninth century, and hence the disputed era of the year 898 given by Vācaspati himself as the date of his Nyāyasūcī

¹ Ed. Benares, 1895. His quotation from Vācaspati on Sūtra II, 1, 32, is found at p. 312. His son, Abhinanda, wrote the Kādambarikathāsāra and lived c. 900 A.D.; Thomas, Kavindravacanasamuccaya, p. 20.
must be taken as falling in the Śamvat reckoning as 841 A.D. This date, it may be added, tells strongly against any effort to bring down the date of Śaṅkara, \(^1\) on whose Śārīrakabhaṣya Vācaspati wrote the Bhāmatī, and the same conclusion is favoured by the view that Maṇḍana Miśra, on whose work Vācaspati also commented, was a pupil of Śaṅkara.

Varadarāja also claims, with obvious truth, to have been an expert in Mīmāṃsā; \(^2\) he was evidently familiar with Śālikanātha’s work, and his commentator fortunately preserves for us a fragment of the Prameyapārāyana chapter of the Prakaraṇapañcikā, no MS. of which has yet been discovered, which gives an authentic list of Prabhākara’s categories.

---

\(^1\) S. V. Venkateswara (J.R.A.S., 1916, pp. 151-62) ignores this evidence in giving Śaṅkara’s date as 805-897 A.D. He cannot have died later than 825 A.D. or so.

between the two sets of instances can only be supplied by reference to an external factor, which is fatal to the belief in intrinsic validity or the reverse. Therefore, the Nyāya argues, it is best to accept the doctrine that apprehension or cognition is intrinsically unauthoritative, and its authoritativeness in any special case is derived from the perfection of the cause of the apprehension. This doctrine, it is pointed out, explains the case of dream consciousness; it is invalid because there is no perfection in its cause, while the waking consciousness may be valid if it is due to a perfect source; if, however, the source is vitiated, when the sense organs are defective, the apprehension is doubtful or erroneous, while in the case of non-apprehension there is no defect in the cause, but absence of cause.

The reply of Kumārila is that, if apprehension were not in itself valid, it could not be made so by any external power. Apprehension needs, indeed, an originating cause, but it does not depend on any external cause for its power of ascertaining the true nature of things. The conclusive argument is that, if the validity of a cognition is deemed dependent on the perfection of its source, then there must be another cognition to guarantee the correctness of the source, and so ad infinitum, and such a process is illegitimate, at least in the eyes of Kumārila, who does not appreciate the possibility of regarding truth as a complete system, in which all parts are dependent on one another, and there is no simple primary truth. All cases of apprehension, therefore, are prima facie valid, and, if cognitions are erroneous or doubtful, that is, due to defects in their causes, while non-apprehension is due to the absence of any cause, as on the Nyāya theory, with which Kumārila agrees in this regard.

The recognition of the non-validity of an apprehension establishes itself most simply when a subsequent cognition sublates an earlier cognition, for instance, when the erroneous judgment, "This is silver," is supplanted by the correct judgment, "This is mother-of-pearl." More indirectly the former judgment can be sublated by another judgment, based on the recognition of the defect of the cause; thus the proposition, "The shell is yellow," may be sublated by the further judgment, "The eye is jaundiced."
Normally, however, a judgment is valid, and is accepted as valid without question; only if, for any reason, such as distance, doubt is possible, are further cognitions sought; if then a sublating cognition is found, and on further investigation it is not sublated either directly or indirectly, then the falsity of the first cognition appears; if, on the other hand, the sublating cognition is itself sublated, the validity of the first cognition is fully established. Thus, in lieu of the *regressus in infinitum* of the Nyāya theory, no more than three or four cognitions are necessary to establish the validity of any cognition, or, to put it more precisely, to negate the objections which may be adduced to impair its normal validity.

Prabhākara\(^1\) similarly maintains the validity of all cognitions as such, and illustrates, in an interesting manner, the diverse modes in which apparent non-validity arises. When mother-of-pearl is mistaken for silver, the error is due to the fact that the percipient observes in the object presented to him the qualities common to the shell and the silver, and omits to notice those which differentiates the two; memory thus brings back to him the cognition of silver, and this cognition is itself real, leading no less than the actual perception of silver to the normal action of seeking to take up the object. Memory here plays the percipient false, for it does not present the silver as connected with something formerly perceived, thus differentiating it from the object actually before the eyes, and this failure is due to a certain weakness of the mind. Similarly, memory is to blame when we mistake one direction for another; the real direction is not seen, and the wrong is remembered. In the dream-state the cognitions which arise are erroneous, in as much as the things seen seem to be directly apprehended, whereas they are only remembered. The factor of apprehension on a previous occasion is lost sight of, thus obliterating the essential distinction between what is apprehended and what is remembered. The presentation of impressions in sleep is

---

\(^1\) Prakaraṇapañciṅka, pp. 32-38; Bhandarkar Commemoration Volume, pp. 167-70.
due to the operation of the unseen principle, that is the
destiny begotten of man's previous acts, which thus secures
to man pleasure or pain in due course.

In other cases the explanation rests, not on the interven-
tion of memory, but on fusion of impressions. Thus the
white shell appears as yellow as a result of jaundice, the
cognition being a blend of the shell perceived without colour,
and the yellowness of the bile in the eye, perceived without its
substratum. So the bilious man feels sugar bitter, because
his taste is a blend of the sugar and bile. The vision of
two moons is due to a lack of co-ordination of the rays of
light which issue from the eyes and bring back the images.

In the case of merely doubtful cognitions the explanation
of their character is that some object is seen as possessed of
a quality which produces two discrepant remembrances; thus,
seen at a distance a tall object may be either a pillar,
or an ascetic buried in meditation and motionless.

As the Mimāmsā differs from the Nyāya in its view of
the validity of cognitions, so it differs in its attitude to the
mode in which a cognition itself is apprehended. In the
Nyāya view this is an act of mental perception (mānasapraty-
aksā), and the Vijñānavāda school of Buddhism holds the
opinion that one cognition is known by another, though,
going further than the Nyāya, it draws the conclusion that, if
the first cognition is to be apprehended by the second, it
must have form, and form therefore does not belong to any
external reality, as the Nyāya holds. The Mimāmsā as
early as the Vṛttikāra¹ maintains that in apprehension it is
the object that is perceived, not the cognition (arthaviśayā hi
pratyakṣabuddhikā, na buddhiviśayā). As expounded by
Prabhākara, consciousness (samvīt), which is self-illumined,
is cognised, but not as an object of cognition, but as cogni-
tion (saṁvittayaiva hi saṁvīt saṁvedyā, na saṁvedyatayā).
To say that the cognition is unknown is absurd, since the
cognition of things is possible only if the cognition is known.
The mode in which cognition is known is inference; in
inference we grasp the existence of a thing only, not its

¹ Mimāmsā Sūtra, p. 9, l. 16; cf. Prakaraṇapañcikā, pp. 56-63
Saṅdarśanasamuccaya, pp. 289, 290.
concrete form; we learn the presence of fire on the mountain from its smoke, but we do not see the actual form of the fire. Cognition, therefore, we infer from the fact that we know things; it, therefore, may be classed as an object of proof (prameya), since it is arrived at by the use of inference, which is a means of proof (pramāna), but it is not an object of direct apprehension. In Kumārila's doctrine⁴ also this view appears, though the doctrine of self-illumination is rejected; the perception of any object does not result in a further cognition of the perception, but in the direct apprehension of the object, and every act of perception involves a relation (sambandha) between the self and the object; this relation implies action on the part of the self as agent, and this action constitutes the cognition, which is inferred from the relationship between the self and the object.

From this point of view it is possible to understand the definition of the valid apprehension given by Pārthasārathi Miśra as that which, being free from discrepancies, apprehends things not previously apprehended.⁵ This definition does not really derogate from the principle of the self-evidence of cognitions; the qualification of freedom from discrepancies merely lays stress on the fact that it is the absence of a sublating cognition which assures us in case of question of the validity of a cognition, while the condition that the thing in question should not have been previously apprehended is not a new factor, but merely a formal expression of the essential nature of apprehension. The exact process of cognition as explained in the Siddhāntamuktāvali⁶ consists in the production in the object of the quality of being cognised (jñātatā), and, however often we cognise the same object, nevertheless in each instance the quality in question is generated anew.

The precise character of the doctrine was, it is clear, largely determined by the desire to avoid the difficulty of

---

¹ Cf. Śāstradīpikā, p. 37; Mānmevyodaya, p. 103; Tārkkikarakṣa, pp. 39 ff.
² Śāstradīpikā, p. 28.
³ P. 118; cf. Kusumānjali, IV 1.
the infinite regress, which seemed to be involved in the theory that a cognition could only be known through the instrumentality of another cognition, and perhaps still more by the aim of avoiding the conclusion, which was derived from this doctrine by the Idealist school of Buddhism, that there existed no self, but merely a series of cognitions, held together by no substantial unity. To the Mimāṃsā such a doctrine was naturally anathema, since the essence of the sacrificial ritual lay in the fact that there was a self who could profit by the performance of sacrifices, not merely in this world but after death. It might have been hard to convince men that sacrifices were worth performing, if the only reward held out had been success in this life, for facts would too often have controverted the claim that sacrifices were availing; when the reward was predicted for the next world, the issue was removed from empirical verification. But the denial of the possibility of introspection thus necessitated was obviously a real difficulty, and rendered the Mimāṃsā view less plausible than that of the Nyāya, which accepted cognition (vyāvasāya) and as supervening upon it consciousness of cognition (anuvyāvasāya). The disadvantage of the Nyāya view was that it tended to ignore the fact, which was strongly emphasised in the Mimāṃsā, of the necessary implication of the subject in all cognition. The distinction between the cognition and the subject, which possesses it, is illustrated clearly in the case of sleep; in it, the school holds, there is no cognition normally, and apparently no cogniser or object of cognition, yet the existence of both, despite sleep, is proved by the fact of remembrance of dreams. The knowing subject, therefore, is not, like the cognition, self-illumined, though as to its exact character Prabhākara and Kumārila are far from agreed.

Of forms of apprehension or cognition Prabhākara recognises five: perception, inference, analogy, scripture or verbal testimony, and presumption; while Kumārila accepts also non-perception or negation, in accordance with the view of the Vṛttikāra, who thus supplements the bare mention of perception in the Sūtra (I, 1, 4), where it is defined as the contact of the sense organs with the object, which must be actually present. The analysis of perception given by
Prabhākara shows on every hand clear trace of derivation from the views of the Nyāya and Vaiśeṣika, which again are ultimately based on popular psychology, such as appears fitfully in the Upaniṣads and in Buddhist texts. The essential feature is contact between the object and the organ of sense, which is essentially something real; but the unity of consciousness makes it clear that there must be a further contact between the organ and the self, whether directly or mediately. The fact that, despite the presence of objects in contact with the senses, there may be no cognition of them, proves that the contact cannot be direct, but must be mediated by an instrumentality called mind. It is this which prevents all facts being always and at once present to the self, and it is this which perceives pleasure and pain and brings them home to the self. It is through the mind also that the self experiences desire, aversion, and volition. But mind has no qualities, such as colour, smell or taste, and therefore for the cognition of colour it needs the aid of an organ which possesses that quality, namely, the eye, which to possess colour as its distinctive quality must be possessed of light; similarly there must be the nose, composed of earth, for the cognition of smell; the tongue, composed of water, for the cognition of savours; the skin, the organ of air, for the cognition of touch; and the ear, consisting of the ether, for the cognition of sound; the organs themselves being imperceptible.

This doctrine, of course, rests on metaphysical grounds and assumes in its treatment of the organs the doctrine that like must be known by like. The deduction of the existence and atomic size of mind by Prabhākara rests on the basis of a doctrine of causation¹ which is different from, but allied to, that of the Nyāya, and which is applied to explain the partial and evanescent characteristics of our experience. Causes are either material or immaterial, the latter head covering all the circumstances which, in conjunction with a material cause, result in an effect. The immaterial or non-inherent cause may subsist either in the

¹ Prakaraṇapañcikā, pp. 52-54; cf. Ślokavārttika, I, 1, 4, vv. 157 ff.
material or inherent cause, or in the material cause of that cause; thus, when by contact with the fire smell is generated in a substance, the immaterial cause is the contact with the fire, and the contact subsists in the substance itself, while, in the case of the colour of a mat, the colours of the yarns which cause the colour of the mat subsist in the yarns, which are the material cause of the mat. In the case of perception the soul is the material cause, and, as the soul is uncaused, the immaterial cause must subsist in it; in a substance, like the soul, only a quality can subsist, and therefore the immaterial cause of perception must be a quality of the soul, and this can only be some contact with an independent substance, just as the colour of the earth atom is produced by contact with fire. This independent substance cannot be all-pervading like space or time, contact with which is from their nature as all-pervading out of the question; it must therefore be atomic, and the only substance which fulfils the necessary condition is mind, residing in the body ensouled by the self, and possessing the power of swift motion, by which it can form a rapid series of contacts, giving the appearance of simultaneity in our mental life. The deduction is ingenious, but unconvincing; it is significant of the consciousness of the gap between the self and the body, which it seeks to bridge by the mediation of the atomic and therefore corporeal, but yet eternal substance, mind.

Of greater philosophical significance is the attitude of the school to the vexed question of the nature of perception as determinate or indeterminate (savikalpaka or nirvikalpaka). The Nyāya Sūtra (I, 1, 4) poses the problem in its famous definition of perception as knowledge produced by the contact of the sense organ and the object, consisting of a determination which does not require definition by name (avyāpadeśya) and is not discrepant (avyabhicāri). The precise of this declaration is far from certain, as the ambiguities of the commentators, Vātsyāyana, Uddyotakara, and Vācaspati Miśra, clearly show, but Dignāga and Dharmakīrti developed a perfectly definite theory in which a clear distinction was drawn between the element of sense in perception and the function of imagination. In the narrowest sense perception is without imagination

Kumārila, though their verbal expression differs; Kumārila holds that in cognition in the form of indeterminate perception neither the genus nor the differentia is presented to consciousness, and that all that is present is the individual in which both these characteristics subsist. Like Prabhākara, he holds that determinate perception is no less valid than indeterminate perception, since it merely makes explicit what is implicit in the indeterminate form.

The views of the school are best understood when brought into contact with the metaphysical doctrine to which they correspond. The essence of that doctrine accepts generality as a real existence which is perceptible as much as individual things, and in the simplest form of perception, therefore, the two aspects of reality are equally present.

The objects of perception include, besides generalities, substances, qualities, and, in the view of Kumārila, but not of Prabhākara, motion. The Nyāya holds that there are six forms of contact in perception; substance is perceived by conjunction; qualities by their inherence in what is in conjunction, and so also the generality of substance; generality of quality by inherence in that which inheres in that which is in conjunction; sound as a quality of ether, a portion of which forms the organ of hearing, is perceived by inherence, and its generality by inherence in that which inheres, while negation and inherence itself are perceived by a peculiar and artificial variety of contact, styled the relation of qualification and qualified. Prabhākara, though he accepts the doctrine of inherence, denies genus to quality, motion, and sound, and so contents himself with recognising the first, second, and fourth forms of contact as valid, and with pointing out that to perceive qualities, there is requisite the contact of the substance and the organs, of the organs and the qualities, of the organs and mind, and of mind and the self. Substance and qualities, he holds, may be perceived apart. In Kumārila’s school, however, which denies inherence, the contacts are reduced to simple conjunction, and identity with what is in conjunction (samyuktatādātmya), the second covering perception of generality of substance, quality and
motion, while the generalities of these two can be perceived by a relationship of identity with that which is identical with that which is in conjunction.

A further technicality, also found in the Nyāya, is the discussion of the exact nature of the means of proof and its result. If the term Pramāṇa is understood as “means of proof,” then perception denotes one or other of the contacts between object and organ, organ and mind, mind and soul, each of which is essential to the result (phala), in this case the mental percept. If, however, Pramāṇa denotes the cognition itself, then perception signifies the mental percept, and its result is the attitude of acceptance, rejection, or indifference of the subject to the object presented to him in the cognition.

Inference in the view of the Vṛttikāra\(^1\) is the apprehension of a thing not before the subject, by reason of the perception of some other thing, between which and the first object we know an invariable connection to exist. The relation, according to Prabhākara, must be both general and constant; examples are the relation between the class and the individuals; substance and quality; the qualities of the same substance; or cause and effect. Smoke stands in an invariable relation to fire, but not vice versa, for on the Indian view glowing iron emits no smoke. Even individual events may thus be related in Kumārila’s view; thus the sight of the constellation Kr̥ttikā suggests the proximity of Rohini. How, then, is this relation to be recognised? The Nyāya view, when it realised the question as a result of the introduction by Dignāga and, following him, Praśastapāda of the conception of a universal relationship (vyāpti) in lieu of mere reasoning by analogy, found refuge in the development of a transcendent perception (alaukika pratyakṣa\(^2\)), by which in perceiving, for example, fire and smoke, the percipient recognised not merely the

---

\(^1\) Mīmāṁsā Sūtra, p. 10; Prakaranapaññcikā, pp. 64-87; Śloka-vṛttika, pp. 345-405; Mānameyodaya, pp. 11-46; Nyāyamañjari, pp. 109-41; Logic and Atomism, pt. II, ch. iii.

\(^2\) The Mīmāṁsā rejects wholly the perception of Yogins, which is the precursor of this idea in the early Nyāya; cf Nyāyamañjari, pp. 93 ff.
connection of the individual fire and smoke perceived by him, but that of fire and smoke in their general aspect. Prabhākara, however, does not recognise this view, the elaboration of which is characteristic of a later epoch. He denies that sense perception can give the knowledge of a universal connection, since it deals only with particular times and places; he also rejects the view that the connection can rest on inference or presumption, since obviously thus there would be a *regressus in infinitum*; nor will he accept the view that it is due to mental activity only, as suggested by the doctrine of Dignāga, since if the mind had this power, why is man not omniscient? His own view is that fire and smoke are perceived by sense as in relation to each other, as qualified by certain conditions of place and time. By repeated experience the impression is gained that, while the presence of smoke is always accompanied by the presence of fire, the reverse relation does not hold, but is qualified always, unlike the former, by special conditions of place and time. Hence emerges the recognition of the permanent relation of smoke and fire, so that the sight of smoke immediately produces the conception of fire. He admits that we do not by inference arrive at any knowledge which we had not before, but he does not admit that this is any defect to the inferential process, which does not involve novelty of result. The school of Kumārila, however, in accordance with its definition of apprehension as involving knowledge of something not previously apprehended, points out, with perfect truth, that the actual inference gives us much more than the mere knowledge of the connection of smoke and fire, which is already known; it enables us to infer the presence, at a particular time and place beyond our vision, of the existence of fire as result of the perception of smoke. Cidānanda¹ recognises also the part played by the *reductio ad absurdum* in arriving at the knowledge of the universal connection.

The relationship, however, which affords the basis of inference, need not refer merely to things which fall within the limits of perception (*drṣṭasvalakṣaṇa*); matters which

¹ *Mānameyodaya*, p. 15.
are supersensuous (*adrṣṭasvalakṣaṇa*) may equally be inferred; thus Prabhākara deduces from the general principle of the relation of cause and effect the existence of the capacity, e.g. of fire to burn. In the Vṛttikāra the distinction appears as *pratyakṣato drṣṭasambandha* and *sāmānyato drṣṭasambandha*, terminology reminiscent at once of the *Nyāya Sūtra* and of Praśastapāda; the latter is illustrated by the inference to the sun’s movement from the observation of a man’s change of place as following on movement.

Following Dignāga and Praśastapāda, but in disagreement with the orthodox commentators on the *Nyāya Sūtra*, the Mimāṃsā distinguishes between the inference for oneself, which is the true logical process, and that for another, which is in reality enunciation for another person of the process of reasoning, which leads to his drawing the conclusion already arrived at by the first person. In inference for one’s self the process is that something is perceived, and recognised as invariably connected with something else, which thus is recalled to the mind; in inference for another a formal order of statement is usually adopted. First the proposition to be established is enunciated, e.g. "The mountain is fiery," the enunciation serving to bring before the mind any contrary judgment which might sublate it. Then the ground for the conclusion thus set out is given in the form of a general rule, supported by a corroborative instance, e.g. "Where there is smoke, there is fire, as in a kitchen."

Finally, the necessary link between the conclusion and the general principle is supplied by the statement that the middle term exists in the subject, e.g. "The mountain is smoking." The order of the propositions is not regarded as of importance by Prabhākara or the other members of the school, who agree in rejecting the more complicated scheme of the Nyāya in which, with a certain redundancy due to its origin in dialectic, the argument is expounded in the five propositions, e.g. "The mountain is fiery; Because it is smoking; Where there is smoke there is fire, as in a kitchen; And this (mountain) is so (possessed of smoke with which fire is invariably concomitant); Therefore is it thus (fiery)." The omission of the last two members is no material injury to the scheme, while Buddhist logicians
reduce the scheme to two members only. The retention of the example is due to the origin of inference as a process of reasoning by simple analogy; even when the necessity of a universal connection was asserted by Dignāga and adopted by Praśastapāda and his followers, the example was religiously attained, and it is not until the latest days of the Nyāya that we find Laugākṣi Bhāskara declaring that the example is a mere superfluity. But Prabhākara and the school of Kumārila are agreed in insisting on the use of positive instances only, rejecting the process of argument from such a general proposition as, "Where there is no fire, there is no smoke, as in a lake," though Kumārila himself recognises its utility, though not its necessity, or, as in the Buddhist view, sole validity.

In the case of inference also there arises the problem, already seen in regard to perception, of the exact force of the term Anumāna and the corresponding result. If Anumāna is used as equivalent to "Inferential Cognition," which is more precisely designated Anumiti, then the fruit or result is the attitude of acceptance, rejection or indifference assumed by the knowing subject to the inferred result. If, however, Anumāna is referred to the means by which the cognition is attained, there is a divergence of view as to the exact process to which the name should be applied. The most immediate cause of inference is the perception of the middle term or minor proposition, e.g. "The mountain is smoking," but a more scientific Nyāya view accepts as the true Anumāna the whole mental process, including the consciousness of the relation between the middle and the major terms, through which the major term comes to be predicated of the minor term, e.g. fire of the mountain. The result in either case is the inferential cognition itself.

The doctrine of fallacies is deduced both by Prabhākara and by Kumārila from the definition given by the Vṛttikāra of the nature of inference. Thus Prabhākara holds that the condition, that the relation between the two terms whence the inference is deduced, must be previously known, precludes all those cases styled in logic cases of the too restricted middle (asādhārana), where the middle term, which it is proposed to use as a basis of proof, is connected with the subject
of the inference alone, thus permitting no further conclusion. Earth, for example, has odour, but nothing further can be derived from this unique relationship. Again the relation must be universally valid, a rule which excludes the too general middle (sādhāraṇa). It is impossible to prove that sound is eternal because it can be known, since many things can be known and yet are not eternal. The necessity of some relation existing excludes the variety of middle term known as annulled (bādhita); to prove sound eternal because it is a product is impossible, since the character of being a product is flatly inconsistent with eternity. Finally, the necessity, that the middle term should be perceived as the basis of the attribution of the major to the minor, excludes the variety of middle term known as unreal (asiddha); thus the perception by the Buddha of righteousness and unrighteousness on the ground of his omniscience is an illegitimate argument, since the omniscience of the Buddha has never been perceived. No other form of fallacy of the middle is accepted by Prabhākara; he rejects the Nyāya view of the fallacy of the counter-balanced middle (satpratipakṣa); which balances against the argument, e.g. of the imperceptibility of air because of its lack of colour, the argument of its perceptibility because of its tangibility. Prabhākara’s argument is that it is not possible for contradictory predicates, such as lack of colour and tangibility, are thus assumed to be, to exist in respect of one subject; hence one of the two alleged inferences is wholly invalid, and there is no true counterbalancing. He holds that really contradictory inferences are possible only of some subject whose nature is unknown, in which case, however, in the absence of the essential known relation, no true inference is attainable.

The views of Kumārila do not differ materially from those of Prabhākara; he classifies the too restricted and the too general fallacies under the head of doubtful (anaikāntika), and adds as a third class the case of conflicting inferences, which he accepts, contrary to the views of Prabhākara. Of the unreal (asiddha) and the contradictory types of fallacy he gives various sub-divisions. In
this and in his elaborate examination of the generality
(sāmānyā), which lies at the basis of inference, he shows
plainly his close relation to the Nyāya and his polemic
against the Buddhist views. In accord with the older view
accepted in Buddhist logic, Prabhākara recognises not
merely fallacies of the ground (hetu), but also of the minor
(pakṣa), the example (drṣṭānta), and even of the proposi-
tion (pratijñā), which in the Nyāya view are all reduced
to special cases of fallacies of the ground.

Analogy or comparison is accepted by both schools of
Mimāṃsā with the Vṛttikāra,¹ but their view of the exact
nature of this form of proof differs from that of the Nyāya
generally, which accepts analogy as a distinct form of proof.
In the Nyāya view the process results in the cognition
that an object, hitherto unknown, when brought within
the range of perception, is recognised, by reason of its
similarity to something already known, to be the object
designated by a name communicated by some person of
experience. Thus a man who has never seen a buffalo
in his life is informed by a forester that the buffalo is like
the cow; on entering the waste he sees an animal similar
in appearance to the cow, and formulates the judgment,
"This thing is a buffalo." The precise force of the judg-
ment is disputed in the school, but the best opinion is that
it applies not merely to the single animal seen, but that the
precipient acquires a correct apprehension of the specific
nature of the whole class buffalo. Thus, as Udayana² says,
the effect of this means of proof is to give a clear under-
standing of the meaning of a word, though he rejects the
view, held by Bhāsarvajña³ and his followers in the Nyāya
school, that analogy can be reduced to a particular instance
of verbal testimony (śabda), as well as that of the
Vaiśeṣika, which reduces analogy to inference. The
Mimāṃsā view of the analogical cognition is that it consists

man who is alive is not in his house, we must assume that he has gone out, in order to make our thinking consistent with our perception. To give rise to presumption there must, Prabhākara holds, be doubt, which the presumption removes, and this element serves to distinguish presumption from inference, since inference can only begin when a certain fact, e.g. the existence of smoke, is known with perfect certainty. On the other hand, Kumārila’s view is that presumption is impossible, if the original fact were in doubt; it is only because the absence of the man from his house is for certain known that it can come into operation; the origin of presumption lies rather in the apparent inconsistency of two equally certain facts, in this case, the man’s absence and his being alive, which leads to the enunciation of a presumption to reconcile the apparent discrepancy, and it is this reconciliation of apparent discrepancies which marks out presumption from inference. The Nyāya on the contrary finds place for presumption under the purely negative (kevalavyatirekin) form of inference, in which it is impossible to adduce a positive instance of the general rule, but the Mimāṁsā could not accept this view since it declined to regard the use of the negative form in inference as satisfactory.

Unlike the Nyāya the Vṛttikāra¹ accepts non-existence (abhāva), or, as it is also termed, non-apprehension (anupalabdhi), as a separate means of proof. The argument in favour of this view adopted by Kumārila is that the absence of any thing, e.g. of a jar on a particular spot of ground, cannot be the object of direct perception, which admittedly, according to the definition of the Mimāṁsā Śūtra, requires a present contact with the organs of sense, nor can it be arrived at by inference, analogy, presumption or verbal testimony. It can only arise into an object of knowledge through the fact that none of the normal methods of cognition can come into operation, and this peculiarity distinguishes it from any of these means. Prabhākara,

with the Nyāya and Vaiśeṣika, declines to accept non-apprehension as a distinct means of proof. When we say, "The jar is not on the ground," all that we mean is that, if the jar were on the ground, we would perceive it there, but that as a matter of fact we see the ground alone. The seeing of the ground is mere perception, and the further statement is merely a qualification of what is perceived in terms of something which, formerly seen along with it, is not now present. In this there is no separate mental process leading to proof. The Nyāya also escapes the difficulty by adopting a peculiar doctrine of its own, under which non-existence, regarded as a positive entity, is perceived by a peculiar mode of contact known as the relation of qualifier and qualified.

Whether, however, four, with Prabhākara, or, with the Vṛttikāra and Kumārila, five means of proof other than verbal testimony or scripture are reckoned, all these means of proof are subject to the defect that they do not avail to determine the nature of Dharma, man’s duty and righteousness. This is established by the Sūtra (I, 1, 4) for the case of perception; that means of proof deals only with existing things which can be brought into contact with the organs of sense, but duty is a thing which is not already existing, but needs man’s action to bring it to fruition, and duty is not tangible so as to be able to come into contact with the organs. Inference, analogy, presumption, and non-apprehension, all have relation to perception, and for that reason are vitiated by the defects of the latter, as we gather from the Vṛttikāra, who thus supplements Jaimini. On the other hand, Jaimini declares that the relation of the word to its meaning is natural and eternal, and Vedic injunctions are, therefore, the source of knowledge of duty, which is something not open to ordinary means of apprehension. Such injunctions are authoritative, according to Bādarāyaṇa as cited in the Mīmāṁsā Sūtra, because of their independence. In the definition of the Vṛttikāra¹ scriptural cognition (śāstra) is the cognition of some thing, which is not percept-

¹ P. 10; Prakaranopañcikā, pp. 87-110, 131-40, 161-70; Ś.oka-vārttika, pp. 405-33, 498 ff, 728 ff; Mānameyodaya, pp. 40-47; cf. Nyāyamañjarī, pp. 150 ff, 205 ff.
ible, through the instrumentality of intelligible sounds, that is words, whose meaning is known. The further analysis of Prabhākara shows that each word is composed of letters which are severally apprehended, impressions of the earlier letters blending with that produced by the cognition of the last letter to bring about the idea of the whole word, which alone has the power to bring about the comprehension of a single definite meaning. The letters, then, are the means of verbal cognition, since it is they which by combination compose the word and bring about the comprehension of its meaning. With Kumārila Prabhākara agrees in disregarding the grammatical school’s doctrine of Sphoṭa, an entity which is invented to meet the difficulty felt by the grammarians as to the possibility of any combination of impressions from individual letters producing the unity, which enables us to comprehend the meaning of a word, and in this view the Vedānta, Nyāya, Vaiśeṣika and Sāṅkhya are at one with the Mīmāṁsā, leaving the Yoga only to support the doctrine of the grammarians.¹

The meaning of words is declared by Jaimini to be natural (autpattika), and Prabhākara insists on the fact that words cannot be supposed to owe their meanings to convention, whether human or divine. The view of the school in this regard can hardly be regarded as anything else than an attempt to bring the doctrine of verbal testimony into harmony with their traditional beliefs in the nature in the Veda, which doubtless long preceded their speculations on the nature of the relation of word and meaning. The Nyāya view, that meanings were given to words by a convention due to the action of God, offended the Mīmāṁsā belief that the Veda had no creator, and that no God, as understood by the Nyāya, existed. The alternative of human convention contradicted flatly the Mīmāṁsā belief that the essential function of the Veda was to lay down injunctions for the performance of actions, whence arose an invisible potency (apūrva) leading to a desirable end, and that this potency was a thing of

¹ Cf. Max Müller, *Six Systems*, pp. 527-44; a full refutation of the doctrine of Bhartrhari that Saṭda is the source of the world and is the lower form of the absolute, Brahman, is given in *Nyāyamanjari*, pp. 531-36; cf. *Sarvadarsanasamgraha*, ch. xiii.
which no person, save through the Veda, could have any knowledge. The Nyāya argument in favour of convention, derived from the case of proper names, is met by the admission that in the case of such names convention is active, but that common names stand on a different footing. In the former case, we know that the persons or things so called have a beginning in time, and that some person must have applied the names to them; in the case of common names we have no warrant for finding a beginning in time for either the things or the words. There has been no beginning of the world or of men, and they must have from the first talked of the things of the world, just as in actual life it is from observing the conversation of his elders, or by their instruction, that a youth learns the meanings of words. What is still more conclusive evidence is that, unless we recognised, as we do, that words possess of their own nature meanings, we could never form the conception of conventional meanings, which is a later development.

The eternity of the word is established formally and at length by Jaimini in a systematic refutation (I, 1, 6-23) of the objections directed against the doctrine by the Nyāya school in particular. The Nyāya\(^1\) holds that the eternity of the word is precluded by the fact that it is perceptible only after effort; that it is evanescent; that in common parlance men talk of producing a sound, just as they speak of producing any ordinary article; that the same word is pronounced by many people and in many places; that words have changes in form, such as *dadhy atra* for *dadhi*; and that, when uttered by many people, the volume of sound is increased. The reply of Jaimini insists that the apparent production of sound, regarded by the Nyāya as a creation, is only a manifestation of a pre-existing entity, a fact in harmony with the disappearance of words on the cessation of the manifestation, while products proper remain in being. The analogy of the sun refutes the argument from simultaneity of perception by many persons; the change to

\(^1\) The Sūtra (II, 2, 23-59) deals with the topic, but in such a way as to show in all likelihood posteriority to the *Mīmāṃsā Sūtra*.\end{quote}
dadhy atra is not a modification of the letter i, but the substitution of a quite different form; increase of magnitude refers to the tone, not to the word itself. Positive arguments for the eternity of the word are not lacking. If it were not so, it would fail in its purpose, the conveying of a meaning to another. Again, we do find in point of fact that men recognise words as being the same when uttered on diverse occasions by diverse people. Language supports the Mīmāṃsā case; when a word is repeated, we talk of ten repetitions of the word, not of ten words. Moreover, no cause for the destruction of words is adduced, and in non-eternal things causes of destruction are always to be found. Finally, there is Vedic authority for the doctrine and no valid counter authority.

The word then exists ever, but only from time to time by effort on the part of some being is it made manifest to us. But effort is not enough; the deaf do not hear, and the effort must be supported by a suitable organ which aids in the cognition of the word. Through the effort on the part of the speaker, the air from his lungs rises upwards and comes into contact with the vocal chords, by which it is modified in character. Passing, then, out from the mouth, it reaches the ears of those near enough to be affected, produces in their ears a change favourable to audition, and passes out, bringing to a close the audition. The ear cavity contains a layer of air, upon which the air current issuing from the speaker’s mouth impinges, producing the condition on which audition supervenes. Thus the Mīmāṃsā rejects the primitive conception under which, as light from the eye travels to its object and brings back vision, so the sound travels in some form to the source of the sound, as held by the Jains, and the Sāṃkhya view that the sense of hearing, as all-pervading, reaches the place of the sound. It also rejects the Buddhist view that actual contact is unnecessary for hearing, and the Nyāya-Vaiśeṣika doctrine of propagation of sound on the analogy of waves, or the filaments of the Kadamba flower, in the ether until it reaches the ether enclosed in the ear cavity, which, on that view, constitutes the organ of hearing. To this opinion Kumārika objects that, the ether being one and indivisible, if one ear is
affected, all ears should equally be affected, and every sound
be heard by every one; or, again, if one man is deaf,
everyone should no less be deaf. The Mīmāṃsā evades
this objection by the doctrine that the ear cavity contains
air, and that it differs in size and shape from man to man.
A further objection to the wave theory is also based on the
fact that sounds travelling with the wind are heard at
further distances than sounds travelling against the wind,
which is inexplicable if the propagation of waves takes
place in the ether, which, of course, is unaffected by wind.

The essential character of the word is, in the view of
Jaimini, not mere denotation, but injunction, a view which
clearly stands in close relation to the doctrine that the
meaning of words is largely learned by the young from the
observation of intercourse among the old; one addresses the
other, and the other acts as a result; one says, gām ānaya,
the other brings the cow. Hence, as against the Vedānta, it
is denied that the essence of Vedic texts lies in the making
manifest of the sole existent Brahman, and asserted that,
even when this seems to be the case, the real import of the
text is an injunction to meditate on the Brahman. From
this view Prabhākara proceeds to develop a conclusion,
which is in harmony with the view of Śabarasvāmin, that
words themselves have no meaning, and obtain it only in
sentences, properly injunctive clauses; gām by itself is
nothing, but attains meaning when conjoined with ānaya,
the whole then signifying generically the genus cow as con-
nected with bringing. This view in the school obtains the
name of the theory of signification in syntactical combination
(anvītābhidhāna), in opposition to the view of Kumārila,
who admits that words possess a meaning independently of
combination in injunctive sentences, and whose theory
accepts, therefore, the combination of significant terms
(abhihitānvaya). The two schools, however, are at one in
holding that the signification of words is a class signifi-
cation (I, 3, 30-35), as the theory of the eternity of words
demands. The modern Nyāya, on the other hand, insists
that the import of words is always the concrete individual,
while the older Nyāya (II, 2, 61-71) adopts the doctrine
that the word expresses the class (jāti), individual (vyakti),
and characteristic mark of the class (ākṛti), all at once. The Buddhist view, again, insists on negative determination only, on the ground that it is impossible to determine positively the specific nature of anything, and that all that can be attained is a series of negations, a view which Kumārila refutes at great length, insisting that the doctrine would mean the impossibility of distinguishing between any two things, since, for instance, both the cow and the horse are negatives of the elephant, and could never deal with individuals, each negation being necessarily general. The defender of Apoha thus accepts the existence of negative classes, which must be all identical, since he cannot rely, ex hypothesi, on any positive means of discrimination between them.

The case for the claim that words denote individuals, as put in the Śūtra (I, 3, 33) in the view of Prabhākara, is that, if it were not so, all injunctions, Vedic or profane, would become meaningless; number and gender would be out of place with regard to nouns; there could be no words to express qualities, and agreement between noun and adjective would be impossible. Prabhākara replies by insisting that, as indicated by the Bhāṣya, if words had individual meanings, such a sentence as, "One should pile the fire altar in the form of a kite," would be meaningless, as it cannot be supposed that such an injunction was intended to refer to an individual kite, while its plain meaning is a reference to the class "kite." Without this element of generality all injunctions are absurd, and the necessary individual reference in certain cases is obtained through the generality, with which it is inseparably connected. Kumārila adds that this view is supported by the fact that the word "cow," as experience shows, does not suggest to us an individual cow, but the class; if individuals were denoted by words, a generic idea like "cow" would be impossible, and even if possible would merely consist of the impression of all the peculiarities of all cows known to the thinker. Again, the word cannot denote all the individuals, since this would mean that the

*Fair usage policy applies
according implicit belief to the assertions made to us by any merely human authority.

There is an obvious difficulty in this reasoning, when it is remembered that Prabhākara, like the Vṛttikāra, insists on the self-evidence of cognitions, from which it would seem to follow that the assertions of any man are *prima facie* valid, until sublated by better evidence. Kumārila, who is always anxious to accommodate the views of the school to popular beliefs, is at the same time more in harmony with the tenets of the school in adopting a doctrine, which does not involve the general denial of the validity of human testimony. He adopts, therefore, the plan of distinguishing testimony as human and super-human (*apauruṣeya*), while admitting both as valid, though for different reasons. In the case of the Veda there is no author, and therefore the possibility of defects is absolutely precluded. In the case of human testimony its validity may be impaired by defects in the speaker, but the presence of excellencies in him precludes the presence of defects, so that if we are assured of the latter we can be assured that the defects do not exist. But it must not be understood that the excellencies positively contribute to the validity of his utterances, which they possess of themselves; the excellencies are of service merely in assuring us of the absence of those defects, which might cause his testimony to be suspect.

The Veda, however, has special claims on our regard, and the *Mīmāṁsā Sūtra* (I, 1, 24-28) meets detailed criticisms of its claim to eternity. Thus it is argued against its validity that parts of it bear names of men, or refer to human beings, to which Jaimini replies that passages bear names of persons who studied them in detail, and that apparent human names in the Veda are really mere cases of homonymns; thus, as Śabarashvāmin points out, Pravāhaṇa is not the name of a man, but an epithet, "The excellent carrier." Similarly, apparently absurd statements, such as "The cows performed a sacrificial session," are to be understood merely as emphasising the value of some ritual action by way of hyperbole, not as showing that the authors of the Veda were foolish mortals. The eternity of words, and the fact that it alone serves to reveal the unseen potency, which
results from obeying its injunctions, are conclusive proofs of the eternity of the Veda, and the alternative view of a creator is needless and unsatisfactory both in regard to the Veda and to the world.

Other forms of proof, both Prabhâkara and Kumârila expressly reject.¹ Sambhava, which is variously interpreted as probability, e.g. that ten is included in fifty, or much more probably as inclusion pure and simple, is regarded as merely a form of inference. Rumour, which like Sambhava is claimed as a means of proof by the Paurânikas, is patently useless for purposes of proof; its source being uncertain, it is quite impossible to afford its contents any measure of credit. Gesture (ceštā), which is given as a means of proof by the Tantra school, the Mimâmsâ ignores.

The relation between the various means of proof is developed by Kumârila; the use of any means of proof such as inference is debarred if there is a more direct mode of cognition, e.g. sense perception, or if the contrary of what is sought to be established is established in advance by the use of some simpler means of proof.

¹ Prakaraṇapañcikā, pp. 125, 126; Mānameyodaya, pp. 64, 65; Ślokavarttika, p. 492 (vv. 57, 58); Tārkaraksā, pp. 116, 117; Śaḍdarśanasamuccaya, p. 207.
THE WORLD OF REALITY

There is nothing to show that the question of the reality of the world had ever occurred to the framers of the Mimāmsā Sūtra, but in Śabaravāmin’s Bhāṣya we find the problem definitely faced in answer to the onslaught made by the Nihilist school of Buddhism on the whole conception of the reality of existence as we know it. The doctrine of Nāgārjuna,1 doubtless an effective restatement of tendencies earlier manifested in the Buddhist schools, denies at once the reality of the external world, and of the ideal world which seems to present us with the knowledge of external reality. That much of its dialectic is sophistic is true, but its novelty of view and the energy with which Nāgārjuna, an eastern parallel of Zeno, urged his paradoxes, evoked from the orthodox schools elaborate replies, both the Nyāya and the Vedānta Sūtras seeking to refute heresies so dangerous to their own tenets. The reply of the Mimāmsā, in keeping with what appears to be the early character of that Sūtra as compared with the Vedānta or Nyāya Sūtras is given only in the Vṛttikāra as cited in the Bhāṣya.2 An opponent objects, in his version, to the validity of our waking perceptions, on the ground that in a dream we have cognitions which all admit to be without foundation, and, if this is true of one set of cognitions, it may be assumed to be equally true of another. The reply of the Vṛttikāra is, in effect, that the argument assumes what is to be

2 Pp. 8-10.
proved, namely, that all cognitions as such are invalid. On the contrary, we can form the idea of the invalidity of dream cognition simply from our having waking cognitions which afford us a basis for discrediting the dream cognitions, and we can explain the defects of dream cognitions by the assumption that the mind in dream is weak and does not act effectively, a view which we can support by the fact that in deep sleep the mind is wholly absent, suggesting that in the dream state it is in a condition intermediate between its effective waking presence and its disappearance. The opponent, however, continues the argument by urging that the object of the cognition is really a void, thus discrediting the validity of the cognition. There is, he says, no difference between the object of perception and the idea; the idea is directly perceived, and there is nothing in reality corresponding to an external object. The Vṛttikāra replies that this view rests on the erroneous assumption that an idea must have a form; it really is without form, which, on the other hand, the external object possesses. What we perceive is not our idea, but something localised as outside ourselves; no idea can perceive another idea, for each has a momentary existence only, whence one cannot be present to another. The opponent contends that the second idea has a certain continuity with the first; as it originates, it becomes known to the first and reveals to it the object, just as a lamp illumines and thus makes known things. Or, put in another way, it is the idea which first originates, and then the object becomes known, having no anterior real existence. The Vṛttikāra refutes this by insisting that, though the idea originates first, it is not known first; as we have seen, the idea is known by inference from the fact of our cognition of an object, and the actual knowledge and the knowledge of the idea cannot possibly be simultaneous. Though we know an object, we sometimes say we do not know it, that is, that we are not conscious of having an idea about it. Further, ideas are essentially connected with names, while perception is essentially immediate knowledge, in which naming is not necessarily involved. Moreover, if the idea and the object had the same form, as is assumed in the opponent's argument, this would sublate the idea, not the object, which is directly
perceived, but in truth the idea is formless and known by inference, while the object is endowed with form and is an object of sense perception. Or, again, the reality of an external world is shown by the fact that we have the idea of a mat only when threads form its material cause; if otherwise, then a man might form the idea of a jar despite the use of threads in the composition of an object; put more broadly, our ideas are not the free result of our mental activity; they are imposed upon us as regards their content by external reality.

The argument as a whole thus falls into two parts, the first dealing with the contention that ideas have no foundation (nirālambana), and the second with the view that external reality is void (śūnya). Both these contentions are the tenets of the Nihilism of Buddhism, and there is no real ground for doubt that the arguments of the Vṛttikāra are directed against this contention. Kumārila, however, or some predecessor, has interpreted the passage otherwise, treating the first part of the argument as directed against the Viśṇānavāda of Vasubandhu and Asaṅga, which admitted the reality of ideas, while denying that of the outer world, and the second part he treats as a refutation of the Śūnyavāda of the Mādhyamika school of Nāgarjuna. Precisely the same fate has overtaken the corresponding discussions of the Śūnyavāda in the Nyāya and Vedānta Sūtras; Vātsyāyana still interpreted the former (IV, 2, 25-33) in its true sense, but Vācaspati Miśra reads into part of it an attack on the Viśṇānavāda; in the case of the Vedānta Śaṅkara turns the whole passage (II, 2, 28-32) into an attack on that school, while Rāmacūḍa treats it as refuting both Buddhist doctrines. The causes for these vagaries of interpretation are obvious; the Śūnyavāda in its refutation of external reality used the arguments which the Viśṇānavāda later employed,

3 Jacobi, J.A.O.S., XXXI, 1 ff.
THE WORLD OF REALITY

but it supplemented the conclusions it arrived at regarding external reality by demolishing the value of our ideas. Any reply to the Śūnyavāda must therefore include an answer which would apply to the Vijñānavāda, and later authors like Kumārila naturally thought that the discussion must deal with the more recent and more convincing school of Vijñānavāda. But the Vṛttikāra shows no knowledge of the peculiar terminology of the Vijñānavāda, such as its distinction between the Ālayavijñāna, the quasi-permanent consciousness which constitutes the individual until he attains Nirvāṇa, and the particular presentations which are thence derived (pravṛtti-vijñāna). Moreover, the argument from the dream condition is not peculiar to the Vijñānavāda; on the contrary it is a special favourite of the Mādhyamikas, occurring in the Mādhyamika Sūtra (VII, 34) and in other texts cited in the Vṛtti on that text.

The view of Prabhākara is in accord with the Vṛttikāra and the Bhāṣya, but Kumārila’s interpretation of the passage has the advantage of eliciting from him a most interesting exposition of, and attack upon, the Buddhist Vijñānavāda and Śūnyavāda theories. The discussion shows the close affinity of the two doctrines, and the form of the argument is often complicated by the resort to elaborate syllogistic reasoning, but the whole makes a very creditable effort to refute either the extreme scepticism of the Mādhyamika or the extreme idealism of the Yogācāras. The reality of an external world is vehemently insisted upon as the only foundation of the common facts of life, including such distinctions as those of virtue and vice, teacher and pupil. If there were nothing but ideas, all our views would be false, since they essentially rest on the belief in external reality. Moreover, there is a complete counter argument; cognitions, we hold, have real substrata in the external world; this notion of ours is correct, because it is without contradiction, like the notion of the falsity of dream cognition. If you reply by denying the validity of the probative example which we adduce, then the doctrine that dream cognitions are false would disappear, and you would lose the chief argument adduced against the reality which
underlies cognitions as a whole. Moreover, in dream cognitions, which you adduce as examples where there is no underlying reality, we find on examination that there is always a real substratum, however much distorted and disguised. If, again, you argue that the unreality of our waking cognitions is revealed by the fact that the Yogin sees reality far otherwise, we retort by denying the validity of his perception, and citing against him the visions of our Yogins. Nor can we accept the arguments of the Buddhist logicians, such as Dignāga, who assert that the activity of the mind can supply the full complement of notions, which appear to us to reflect reality; without an external world all these mental conceptions would be meaninglessness, for we deal not with conceptions, but with the facts of life.

Against the conception that cognition alone exists to the exclusion of cogniser and cognised, Kumārila contends with special energy. The case for this conception is set out by him with much care as the prelude to his reply to the Śūnyavāda. It rests on the difficulty of understanding how cognition and cognised can be related. There cannot really be two entities, one formless and one possessing form, for in memory, when no object is present, we still have cognition of form, showing that the cognition has form, and rendering the hypothesis of an external reality mere superfluous. How, again, can there be contact between the incorporeal cognition and the external object? An object can be perceived only if it has form, but again the form does not exist until it is perceived, which involves contradiction. Again, even if contact were possible, how could two things, in themselves without form, acquire it in this way? Moreover, the idea we have of a double moon is admittedly erroneous, and therefore cannot rest on reality. So also we use a variety of words of varied gender for the stars, and a masculine word (dārāh) for a wife, which would be impossible if reality controlled our ideas. The same thing, e.g. a lovely woman, raises very different feelings in the mind of the ascetic, the

*Fair usage policy applies
speculation, which holds that the form of the object is impressed on the cognition. The objection to the Nyāya-Vaiśeṣika view appears to be that the idea is understood by the school to be perceived simultaneously with the object, and, as the perception of the idea requires that it should be provided with visible form, that is, colour and extension, there would be no possibility of demonstrating the existence of the external object, since, the form being cognised with the idea, an external reference would be needless. The objection, it must be noted, is not cogent against the developed form of the Nyāya doctrine, in which it is held that on the actual cognition (vyavasāya) there supervenes the mental perception of the cognition (anuvyavasāya); the cognition thus brings reality immediately before the mind, while in a secondary act the cognition itself is made the object of introspection, as in the accepted theory of modern psychology. The Mīmāṁsā, by ignoring this possible view, renders it necessary to hold that a cognition can never be the object of introspection; it is an entity which is inferred from the fact of cognition; its existence is known, but not as an object of sense-perception of any kind. Mental perception, which the school admits, is thus restricted to those forms of mental activity which are not cognitive.

There remains, however, yet another contention of the Śūnyavāda which Kumārila seeks to refute. It is based on the view that atoms are invisible, that aggregates of atoms are invisible, that all objects, being composed of such aggregates, are invisible and incomprehensible, and therefore void. The weight of this argument lies in the fact that the Mīmāṁsā gives a more or less hearty acceptance to the doctrine of atoms, though Kumārila is careful not to bind himself definitively to it. The conglomeration of atoms, it is urged, is impossible, since atoms have no extension, or at any rate no parts, and no contact between them is, therefore, conceivable. More generally, it is also contended that no whole of parts can really exist. If it did, it must either reside in its entirety in each of the component parts, which is positively absurd, or it must reside collectively in all the parts; in this event, even if it can be assumed that it is something over and above the parts, it would be perceived only when all the parts had
been perceived, which would be normally impossible, absolutely so in the case of a whole of imperceptible parts like atoms. This dialectic, which the *Nyāya Sūtra* (IV, 2, 7-14) also seeks to face, is met with the argument that, as there is an interminable dispute between the opposing schools, the Buddhists who deny the difference of the whole from its parts, and the Nyāya who assert the distinction, the safe course lies in the *via media* of admitting that a whole is in one sense different from, and in another sense not different from, its constituent parts. A whole, therefore, is not of a simple and absolute character, and resembles an object with variegated hues, but it is not the less real for that. Invalidity applies to doubtful ideas, not to ideas of an object which in itself is not absolute in character. The stock argument of the Buddhists, that if any composite thing is investigated no whole remains after deduction of the composing parts, e.g. the threads of a mat, is met by the rejoinder, in harmony with the Nyāya, that the same result is achieved on the Nyāya view, which regards the whole as different from the parts; the whole, in their view, only exists when there is an agglomeration of parts; if, mentally, you take away the parts, naturally the whole, despite its difference from the parts, disappears also. The further hypothesis, that what is really seen is merely atoms without real unity but visible in numbers, though singly invisible, is naturally rejected as devoid of cogency. Finally, the argument is used that the attempt to ask if a whole resides in the parts, as an entirety in each or collectively in all, is mistaken. The whole is impartite, and the idea of its relation to its individual constituents in whole or in part is a question which arises only in respect of the individual elements, and is meaningless as applied to the whole.¹

The value of Kumārila’s refutation of the Buddhist schools is not inconsiderable; he brings out fully the grave difficulties which meet any effort to account for the facts of life without accepting some permanent entity, and the objections to the effort to evade this problem by creating the fig-

¹ *Ślokavārttika*, pp. 632-34 (vv. 75-83); cf. *Nyāyamañjari*, p. 550; *Avayaivinirākaraṇa* (*Six Buddhist Nyāya Tracts*, pp. 78-93).
ment of an unending series of ideas, each of which must be supposed to take upon itself in some form the impressions of the whole previous history of the series. He insists, also rightly, on the impossibility of accepting any purely subjective idealism, but he does not seem to have appreciated the possibility of discarding this attitude, but accepting an objective idealism. A suggestion to this effect was implicit in the doctrine of knowledge adduced by Dignāga,¹ which insisted that inference and other mental acts dealt with ideal contents, but Kumārila was able to reply to this doctrine that the whole scheme was meaningless, as it assumed that there was nothing truly real beyond the unreal play of ideas in the mind. No true objective idealism was, therefore, before his mind, and he is content to assert absolutely the reality of an external world, which is not the product of intellect, but which is known by us, the relation of knowledge to reality being of a peculiar and unique type, involving an activity on the part of the cogniser which does not, however, create the object.

In their positive doctrines as to the nature of the universe there are considerable differences between Prabhākara and Kumārila. The former admitted, it is clear,² no fewer than eight categories, while the latter accepted five only. They agreed in regard to substance, quality, action or motion, and generality, but, while Prabhākara accepted the category of inference from the Nyāya-Vaiśeṣika, and added the three of potency or capacity (sākti), similarity (sādṛśya), and number (samkhya), Kumārila rejected the three additions of Prabhākara, and also, in this case in agreement with his predecessor, the particularity (viṣeṣa) of the Nyāya-Vaiśeṣika. Finally, inference was also rejected by him. On the other hand, the texts ascribe definitely to him the acceptance of the category of non-existence (abhāva), with a fourfold division of prior negation, subsequent negation or destruction, absolute nega-

¹ Ślokavārttika, p. 258 (v. 167). The invalidity of all but indeterminate perception is asserted in Śaddarśanasamuccaya, p. 41.
² Prameyapārayana in Mallinātha Tārākaraśā, p. 164; Mānameyodaya, pp. 65, 114 ff; Prakaraṇapañcikā, pp. 110, 111 (overlooked in Prabhākara School, p. 89).
tion, and mutual negation, sub-divisions which, of course, are simply transferred bodily from the Nyāya-Vaiśeṣika doctrine. Non-existence stands in definite opposition to the other four categories accepted by Kumārila; though regarded as real, it is nevertheless admitted to be essentially relative to the four categories of being (bhāva). Prabhākara, however, rejects non-existence, as might have been expected from his rejection of non-existence or non-apprehension as a means of proof. The only reality, in his view, in the absence of a pot from a spot of ground is the spot of ground. The particularity of the Nyāya-Vaiśeṣika, which serves to differentiate such things as the ultimate atoms and selves, has no foundation as a separate category, as the differentiation can be based on the ordinary qualities which these things possess.

Substance is that in which qualities reside, and Prabhākara reckons the number as nine: earth, water, air, fire, ether, the self or soul (atman), mind, time, and space. Kumārila is credited with admitting also the substantiality of darkness and sound, while others accept gold as a twelfth. Of these earth, water, air and fire all possess colour and tangibility, and accordingly are the objects of the senses of sight and touch, but only when in non-atomic form, for some degree of magnitude is recognised by Prabhākara, as by the later Nyāya-Vaiśeṣika, as a necessary condition, along with touch (sparśa), of proper sense perception. The other five substances cannot be regarded as perceptible, since they cannot be seen or touched, and therefore are only inferred to exist. In the case of ether the apparent whiteness of it is due to particles of fire in it, while the darkness of night is not a substance, nor is it a quality; if it were a quality it would be perceptible by day also, and therefore must be deemed to be merely absence of light. A variant of this doctrine in the school of Prabhākara declares darkness to be the absence of the knowledge of light. Kumārila claims darkness as a substance, because it is blue in colour and moves, these two facts being necessarily attributed to some

1 Prakaraṇapañcikā, pp. 24, 54, 77, 84, 141 ff.; Mānameyodaya, pp. 6 ff, 66 ff, 78 ff; Ślokavārttika, p. 404 (v. 183); Tārākaraṅkā, pp. 133, 134.
substance, but the Nyāya denies these facts. Pointing out that a colour can be perceived only in light, and darkness is experienced when there is no light, Śridhara again suggests that darkness is the imposition of blue colour on something else. The necessity of inferring ether arises from the nature of sound, which must be provided with a substratum; unlike Kumārila, Prabhākara sees no sufficient ground to give to sound the rank of a distinct substance, a position which has obvious difficulties in a system which allot's so pre-eminent a place to the word.

Air, in Prabhākara's view is neither hot nor cold, the apparent heat being due to fire particles, and the coolness to water particles diffused in it. Kumārila also regards it as perceptible, but does not claim that it has any colour; he rejects therefore the Nyāya view that it can only be inferred, colour being necessary to perception, and adopts the later Nyāya opinion which admits of direct perception through the sense of touch. In this and in many other details his school, if not the founder, clearly largely assimilated the Nyāya-Vaiśeṣika physics, though it is clear that Kumārila himself was not prepared to accept the atomic theory as absolutely essential to his principles. Some of his followers went further, and claimed that ether, space and time were directly perceptible, but on these points the doctrine of both schools seems never to have been developed.

The account of qualities which inhere in substances, and are distinct from motion, given by both Prabhākara and Kumārila shows obvious obligations to the Vaiśeṣika.\(^1\) Prabhākara gives as objects of perception the qualities of colour, taste, smell, and touch; number, dimension, individuality, conjunction, disjunction, priority and posteriority; pleasure, pain, desire, aversion, and effort, and, like the Vaiśeṣika, distinguishes conjunctions and disjunctions according as they are produced by the action of one or both of the things concerned, or rise mediately through another conjunction or disjunction. Kumārila, like Praśastapāda, enumerates twenty-four qualities: colour, smell, taste,

\(^{1}\) Prakaraṇapañcikā, pp. 54, 151; Mānameyodaya, pp. 99-111; Tārkikarakṣā, p. 164.
touch; number, individuality, dimension, conjunction, disjunction, priority, posteriority; gravity, fluidity, viscidity; cognition, pleasure, pain, desire, aversion, effort, impression (covering velocity, elasticity, and mental impression), tone (dhvani), which is a quality of the air, revealing sound, manifestation (prākatya), a quality common to all substances, perceptible and determining them, and potency. Potency is reckoned by Prabhākara as a distinct category; its existence is proved by inference: fire burns normally, but under the influence of some spell it ceases to have that effect; there must, therefore, be something of special character in the fire by virtue of which it burns. Words also have the potency to denote meanings, and so on ad infinitum. It is eternal in eternal things, but transient in transient things, coming into being with them and disappearing when they disappear, and thus differing from impression (samskāra), which even in eternal things is evanescent. The Nyāya view is sensibly opposed to the recognition of any such conception, since, strictly speaking, the number of potencies in any object might be regarded as very numerous, negating the possibility of accepting potency as one quality or a distinct category of being. Number, which Prabhākara makes a separate category,¹ in the list of Kumārila falls to the rank of a quality. The classification of qualities and their assignment to substances follows generally the classification first given in infinite detail by Prāṣastapāda. From his list Kumārila departs only in the substitution of tone for sound, and of manifestation and potency for merit and demerit. Unlike Prāṣastapāda, he denies that cognition is the object of mental perception, though admitting this for the other special qualities of the self. From the school of Prabhākara that of Kumārila differs in asserting that individuality applies both to eternal things and to products, while the former asserts that it applies to eternal things alone. Priority and posteriority apply to both space and time; the later Nyāya wisely rejects both as general qualities, since they are essentially determinations of space and

¹ In Prakaraṇapañcikā, p. 54, it appears as a quality: impression in its various form is referred to (pp. 80, 81) as inferred only; the full treatment occurred in the missing Prameyapārāyaṇa (see ibid. p. 111).
time, or, as stated in the *Mānameyodaya*, are special qualities of these entities.

Action\(^1\) as a category covers only, as in the Nyāya-Vaiśeṣika, the restricted field of motion, with its traditional five-fold divisions, as throwing up or down, drawing towards or expanding, and motions other than these. But Prabhākara maintains that it is only an object of inference, while Kumārila holds that it is perceived. The argument of the former rests on the fact that, when we think we see motion, we only see conjunction and disjunction with points of space, these contacts subsisting only in outside space and not in the moving thing, in which the activity of motion must reside. The reply of Kumārila’s school is that it could only be inferred as the immaterial cause of the conjunction and disjunction of a thing with points in space, which would mean that it must subsist both in space and in the thing, whereas it exists in the thing only. We really see motion, which is in the thing and which brings about conjunction and disjunction in space, a doctrine which has now excellent modern support.

Generality both Prabhākara and Kumārila admit as real and as directly perceptible by the senses, and thus set themselves at variance with the Buddhist denial that there is any such thing as generality. The first Buddhist argument rests on the impossibility of the existence of any whole, which both schools of Mimāṃsā deny. But further difficulties are raised. If generality is perceptible and is eternal, as claimed in the Mimāṃsā, the absurdity arises of perpetual perception. Again, how is generality related to the individuals; is it present in its entirety in each?\(^2\) If so, then there are as many generalities as individuals, and there is mere duplication of names. If not, then it must exist in all collectively, and therefore be entirely unknown, since one can never know all the individuals which make up a generality. If it is eternal, and exists before the individuals,

\(^1\) *Prakaraṇapāṇcikā*, pp. 78-81; *Mānameyodaya*, pp. 112, 113; a wider view is taken in *Ślokavārttika*, p. 707 (v. 74).

*Fair usage policy applies
and in some cases by action also, in places where the duties of the castes are duly supervised by the king. Prabhākara, however, declines to admit of generalities such as Brahmanhood and Kṣatriyahood, which Kumārila accepts.

Prabhākara also differs from Kumārila in his use of the category of inherence as a means of explaining the relation of the individual to the generality. When a new individual of a class comes into being, what is produced is not the existence of the generality, which is eternal, but of the relation of inherence between the individual and the class. Inherence differs from contact in that it does not presuppose the previous existence of the things affected by it, and, unlike the Nyāya-Vaiśeṣika, Prabhākara does not hold that it is necessarily eternal. This affords an easy reply to the question of the fate of the class character on the destruction of an individual; it does not go away, as it has no motion; it does not subsist in the individual, which is no longer in being; it does not cease to exist, for it remains in other individuals, but the inherence between the class and the individual comes to an end. But Kumārila\(^1\) rejects \textit{in toto} the idea of inherence as a true category; a relationship, he argues, can exist only between things which are established as distinct entities, and, as inherence is supposed to be a relation between things which, like the class and the individual, are inseparable, it is a contradiction in terms.

While Kumārila’s school admits, as usual, the existence of generalities of substance, quality, and action, Prabhākara declines to accept the last two or a \textit{summum genus} of existence as a real generality, on the ground that, as each generality rests on the fact of actual perception, the genus existence must be disallowed, as we do not in fact perceive things as merely existing. The true sense of existence is merely the individuality of things (\textit{svarūpasattā}); it is not a true class character.

\textit{Similarity}\(^2\) as a category is asserted by Prabhākara, who holds that its existence is proved by our consciousness in

---

1. Ślokavārttika, I, 1, 4, vv. 146-55; cf. Aśoka’s \textit{Avayavinirākarana} (\textit{Six Buddhist Nyāya Tracts}, pp. 78-86).
2. Prakaranapañcikā, pp. 110, 111; Ślokavārttika, pp. 438-41 (vv. 18-23), 565 (vv. 74-77); Tārkikarakaśā, p. 164.
precisely the same way as every other category. It cannot be held to be substance, for it exists in quality and motion as well as in substance. It cannot, in view of its relation to motion and to quality, be a quality; motion has no qualities, nor can a quality have a quality. It is not generality, for no comprehensive conception of it exists. It is quite other than the relation of inherence. It is not particularity, which in any case is not a true category, since it is no more than the quality of individuality. It must, therefore, be a distinct category, which is perceived in the apprehension of qualities, motions, or parts of two things as common to both. Kumārila’s rejection of this category is based on the fact that similarity admits of degrees, e.g. the resemblance of a cow and a buffalo is considerable, that of a cow and a boar is slight; if there were a true category there could be no degrees. He agrees, however, with Prabhākara in regarding similarity as directly perceptible. It consists, in his view, in the fact of the possession by two objects of the same arrangement of parts, and he attributes the erection of a special class of similarity to a misunderstanding by the Vaiśeṣikas of the doctrine of Vindhyavāsin, which merely asserted that generality consisted in possession of unity of form (sārūpya), which was taken to mean likeness (sādṛśya). The same author is elsewhere cited by Kumārila as denying the doctrine of the existence of the subtle transmigrating body, a view accepted from him by Kumārila, and as enunciating the principle of the genesis of inference, which is accepted also in the Ślokavārttika. Who this author was is not apparent; he cannot, it is certain, be Īśvarakṛṣṇa, nor is there any plausibility in identifying him with the Vindhyavāsa who plays a part in the history of the Śāmkhya, whether or not he was really Īśvarakṛṣṇa. He may, of course, have been an older teacher of the Mīmāṁsā school itself.

Cause is not reckoned by either school as a category, a fact significant of the curious failure of Indian

---

1 Pp. 704 (v. 62), 393 (v. 143).
2 Śāmkhya System, pp. 62, 69. Guṇaratna (Sadārśanasā§anuccaya p. 104) cites a Śloka of Vindhyavāsin (!), who was clearly, in his view, not Īśvarakṛṣṇa, but it is hard to say of what value his evidence is, or to whom he refers.
philosophers to find a due place for this issue, even when, as in the case of the Nyāya-Vaiśeṣika, they by no means ignore its importance. But there seems no evidence that either Prabhākara or Kumārila contributed anything of novelty or value to the doctrine. In his discussion of perception, as we have seen, the former makes use of the doctrine of the division of causes into the material or inherent (samavāyi-kāraṇa), and immaterial or non-inherent (asamavāyi), a distinction, doubtless, taken from the Nyāya-Vaiśeṣika.¹ The denial by Kumārila of the conception of inference would have precluded him from adopting such a distinction of causes.

Causation, however, affords Kumārila an argument in favour of his thesis of the reality of non-existence.² That entity he classifies as prior, as the non-existence of curd in milk; subsequent or destruction, as the non-existence of milk in curd; mutual, as the non-existence of the horse in the cow and vice versā; and absolute, as the non-existence of a horn on the head of the hare. Without the recognition of the first two kinds, he contends, there could be no idea of causation: in its prior negation lies the character of the curd as effect, in its destruction that of the milk as the cause. Everything has two aspects: it regards its self, it exists, as regards anything else it is non-existent; and both these aspects are real and necessary to each other. It is only through this fact that we can say, "There is no jar on the ground," or that we can ever differentiate things, which is possible only on the ground of a real existence of non-existence. It is impossible to perceive this entity, for perception must deal with the existent; the process of intellection is, therefore, purely mental; the ground is seen, the jar remembered, and then ensues the purely mental cognition styled negation, which must be distinguished from inference or any other form of knowledge.

¹ It may be noted that Śālikanātha commented on the Praśasta, pādabhāṣya (Bodleian Catalogue, p. 244).
IV

GOD, THE SOUL, AND MATTER

Though the Mimāṁsā is so deeply concerned with the sacrifice, it has no belief in the doctrine that the rewards of offering are to be expected either from the deities to whom the offerings are directed to be made, or from a God as creator or apportioner of reward and punishment. The sacrifice generates an unseen potency, whence the goods desired by sacrificers are obtained; the *Vedānta Sūtra* (III, 2, 40) expressly negatives the idea that in Jaimini’s view there was divine intervention in this regard, and the atheism of the true Mimāṁsā is regarded with such unani-

mity as to render it impossible to explain it away.¹ The full development, however, of the doctrine is, as usual, to be found in Prabhākara and Kumārila, who adopted from the Nyāya-Vaiśeṣika the groundwork of their views of the world, but declined to follow that school in its speculations on the existence of a creator.²

The Nyāya-Vaiśeṣika, accepting the doctrine of atoms on the one hand and of the periodical creation and destruction of the world on the other, had found it necessary to introduce the conception of a creator, in order to secure in some measure a mode of bringing about the renewal and destruction of the combinations of the atoms and their connection with souls. But Prabhākara and Kumārila alike deny absolutely the validity of the belief in the periodic creation and dissolution of all things; they accept a con-

² Prakaranapañcikā, pp. 137-40; Ślokavārttika, pp. 639-80; Mānameyodaya, pp. 70-74; cf. Nyāyamañjarī, pp. 193-204; Saḍ-
darśanasamuccaya, pp. 284 ff.
stant process of becoming and passing away, but they find no ground for the systematisation of the process, so as to produce cycles of evolution and involution of souls. Experience, Prabhākara urges, shows us the bodies of all animals being produced by purely natural means; we can argue hence to the facts of the past and the future, and need invoke no extraneous aid. Moreover, the whole conception of God supervising the merits and demerits of men is idle; God cannot perceive merit or demerit by perception, since they are not perceptible, nor by the mind, which is confined to the body which it occupies. Supervision also is impossible, even had God the necessary knowledge; it must take the form either of contact, which is impossible as merit and demerit being qualities are not subject to contact, or inherence, and plainly a man's qualities cannot inhere in God. If the argument is adduced of the analogy of the carpenter, it may be replied that on this basis the creator would have to be an embodied spirit, and no embodied spirit can affect such subtle things as the atoms or merit and demerit. Nor is it conceivable that the atoms should themselves act under the will of God, for no parallel to such activity is known to us, and, if it were possible, it would follow from the eternity of the will of God that creation would be unceasing. The only true case of supervision known to us is that exercised by the soul over the body, which it occupies by virtue of its merit or demerit, and there is no need to hold that the world is more than an ever-changing sequence of things affected by the souls in it.

Kumārila's treatment includes both an elaborate attack on the whole conception of creation and a special refutation of the Vaiśeṣika views. He ridicules the idea of the existence of Prajāpati before the creation of matter; without a body, how could he feel desire? If he possessed a body, then matter must have existed before his creative activity, and there is no reason to deny then the existence of other bodies. Nor is there any intelligible motive for creation; granted that, when the world exists, conditions are regulated by merit and demerit, originally there was no merit or demerit, and the creation of a world full of misery was inexcusable, for it is idle to argue that a creator could only
produce a world in which there is sin and pain. Yet, if his action is conditioned, he cannot be omnipotent. If, again, it is alleged that the creation was for his amusement, this contradicts the theory that he is perfectly happy, and would involve him in much wearisome toil. Moreover, there is no possibility of establishing the reality of his creative activity. It could only rest on reports of the first of created men, and they could have no power to testify effectively to a state of things existing before they were brought into being. They could only rely on what they were told by the creator, and his assertions might be mere boasting. Nor is it at all satisfactory to accept the belief in the creation of the Veda, which by no means enhances its value; still less to hold that it resides with the creator during the periodic dissolutions of the world, for which, again, there is not a shred of evidence.

Against the Vaiśeṣika view of creation exception is justly taken to the difficulty involved in holding that in some manner the action of the Supreme Lord brings to a stand at one time the potencies of all the souls, and then awakens them all when a new creation is imminent. Against this view it is contended that the activity of men arising from their past deeds can never cease, and it is absurd needlessly to complicate matters by assuming both the force of men's deeds and the intervention of the desire of God. Moreover, it is impossible to explain why this desire should ever arise, and unintelligible to elucidate the mode in which the creator can act without a body or acquire a body.

Kumārila, however, does not content himself with refuting the Nyāya-Vaiśeṣika doctrine; he attacks equally the Vedānta, on the simple ground that, if the absolute is, as it is asserted to be, absolutely pure, the world itself should be absolutely pure. Moreover, there could be no creation, for nescience is impossible in such an absolute. If, however, we assume that some other cause starts nescience to activity, then the unity of the absolute disappears. Again, if nescience is natural it is impossible to remove it, for that could be accomplished only by knowledge of the

self, which, on the theory of the natural character of nescience, is out of the question. Nor is the Sāmkhya doctrine of many selves and nature any more tenable as a theory of creation. The beginning of creation is held to be due to a disturbance in the equilibrium of the three constituents which make up nature. But how can such a disturbance take place at a first creation, when there are no potencies due to men’s actions demanding fruition? Even at subsequent creations, how do latent potentialities by themselves become fruitful without any consciousness to direct them? And, if they do attain fruition, the Sāmkhya theory of liberation by knowledge is without value, since the potencies will remain able to come again into activity. Knowledge, it must be recognised, can never give freedom from bondage, which can be attained only by the exhaustion of action, for which the Sāmkhya metaphysics affords no adequate possibility, owing to the infinite potentiality of nature.

Though the existence of a creator is denied, the Mīmāṃsā accepts without reserve the doctrine of the existence of the self or soul, and Śabarāsvāmin elaborates the case for its existence; Prabhākara and Kumārila both develop the theme in close accordance with his views. The necessity of the existence of the self for the Mīmāṃsā rests on its fundamental assumption that the sacrifices are performed to secure, in many cases, a reward not in this life. There must, therefore, be an eternal entity, distinct from the body, the sense organs, and cognitions, which is both the doer of actions and the reaper of their reward. It is not unnaturally objected that there is a strong presumption against claiming eternity for something which suffers change, but the more serious objection is made that men do not realise, when they reap results, the actions which brought these about, thus invalidating the value of the assumed continuity, and that there is nothing unnatural in a man determining to do an act which will lead to evil results in the future, secure in the knowledge that, when

then they would possess intelligence, and rebirth would become impossible, since on their destruction intelligence would go also; further, the share played by the organs in developing the idea would contradict the Buddhist doctrine that the idea arises from a preceding idea only. Nor is there any evidence that the first cognition of the newborn child is due to a previous idea; we hold that it arises from the functioning of the sense organs. There must, therefore, be something which possesses the potentiality of ideas, is eternal, and capable of transmigration. This need is furnished by the soul, which is immaterial and omnipresent, and thus, without motion, is able to connect itself with one body after another.

The soul, then, is essentially active, for, unlike the Vaiśeṣika school, the Mimāṃsā does not, according to Kumārila, deem that motion is the only form of action, and it is through its superintending activity that the motions of the body are achieved. We must, therefore, conceive the soul engaged from time immemorial in the work of directing a body, the acts done in each life determining the character of the body attained in the next, a process which will cease only, if ever, when the soul ceases to obtain a bodily habitation.

Again, from another point of view the Buddhist conception of a series is imperfect. Granted that it is impossible to establish a soul merely on the ground of such attributes of the soul as pleasure, desire, or memory, adduced by the Vaiśeṣika school as indications of the existence of the soul, since these might be explained on the theory of impressions, no such explanation is available to dispose of the cognition of the self. In the case of the two judgments, "I knew" and "I know," the theory of ideas breaks completely down. The first idea cannot, as past, know the later idea, nor can the later idea know the first. It is useless to appeal to a series, for the series was not present at the first cognition, nor is it present at the last. Nor is there any unity in the two cognitions, for the Buddhist refuses to recognise any classes. Nor can it be argued that similarity would suffice, for in cognitions of different objects, e.g. a horse and a cow, there is no similarity of cognition. The bare fact of each
being in one aspect a cogniser would at most give merely the bare recognition that there was a cogniser, but no personal identity. A true permanent substance is, therefore, essential, and such a substance explains far more effectively than any other hypothesis such phenomena as desire, memory, and pleasure and pain, while it is the indispensable basis of merit and demerit.

This permanent entity is quite distinct from the body, the senses, or cognition. The elements of the body are seen to be without intelligence, and the combination of such elements cannot produce intelligence. If, again, one element alone had this nature, the others could not coalesce with it to form a body. A dead body, which consists of precisely the same material as the living body, contains no intelligence. On the contrary, the fact that a body is an organised whole suggests irresistibly the fact that it serves the purpose of another which directs it, namely, the soul. Such phrases as “I am fat,” or “I go,” are merely natural transfers of use. On the other hand, the phrase “My body” shows clearly that the ego and the body are different. The same argument can be applied to the case of the sense organs, but others are also available; thus the fact that I feel with my hand what I see with my eyes shows that there is something beyond the sense organs. Again, a blind man remembers what he saw when his eyesight remained, which would be impossible if the organ were the self. More generally the analysis of any cognition reveals to us the fact that the “I” is not the body, nor the sense organs nor the cognition itself, but something over and beyond. Many people can have the same cognition as far as content is concerned, but each cognition has an individual reference, as is seen also with perfect clearness in the facts of memory; if there were no “I”, how could we have the fact that one, who has learned half a lesson at one time, can later on resume the task at the place at which he left off? The objection, that the terms “My soul” indicate a difference between the “I” and the soul, is met by holding that in the word “soul” the meaning “cognition” is to be understood, cognition often being inaccurately described as the soul. The result can be confirmed by the evidence
of the Samhitās and Brāhmaṇas, the former of which implicitly, the latter explicitly, recognise the existence of the eternal soul.

There must, however, be something to mediate between the eternal and omnipresent soul and the world, else its knowledge would be eternal and omniscient, as emphatically it is not. The mediator is furnished by mind, whose contact with the soul is the essential condition for its consciousness in all its forms. For this contact it is necessary that mind should, in contrast to soul which is omnipresent, be atomic, and possess the capacity of extremely rapid motion, a fact which makes our experiences, even when truly successive as they are, appear on occasion to be simultaneous. Mind, however, can exist only in a body, which the soul must ensoul, and then through it the soul comes into contact with the outer world by means of the sense organs. Through the contact of external objects with the sense organs, mediated by the mind, the soul appreciates the outer world; the mind directly conveys to it knowledge of pleasure, pain, desire, aversion and effort, which are among its qualities. It possesses further qualities: cognition, which is self cognised in the terminology of Prabhākara or, as Kumārila has it, inferred; merit and demerit, which are inferred; and impression (saṃskāra), which is produced by apprehension and results in memory, from whose operations it is inferred. The principle of impression, moreover, really applies to merit and demerit, for these exist in the form of impressions of past activities, and can hardly be said to be separate qualities, since they merely sum up in terms of moral value the nature of the accumulated impressions; hence, though they appear as distinct elements in the Nyāya-Vaiśeṣika lists, one list of qualities attributed to Kumārila more logically leaves out merit and demerit. Further, the soul possesses the common qualities of number, namely, unity; individuality; dimension as omnipresent as opposed to atomic, or of the same size as the body as held by the Jains; and conjunction and disjunction with mind. Nothing is more obscure than this relation between the soul and the mind. It is said to be brought about by merit and demerit, but it is obvious
that it is also affected by the activity of the soul, which is never regarded as merely passive in its attitude to mind. The impossibility of expressing the relationship intelligibly is inherent in the effort to bridge the gulf between the material and the immaterial worlds. But it is curious that, as in the Nyāya-Vaiśeṣika, there is no real attempt in the Mimāṃsā to explain in what way mind is active in the processes of reasoning. It is obvious that inference, and the other means of proof apart from sense perception, must be due to the activity of mind in contact with the soul, but insistence on the part of mind in the direct perception of pleasure, pain, desire, aversion, and effort has apparently resulted in obscuring the essential part which it must be deemed to play in the higher mental activities, if for no other reason than that they all rest, save verbal cognition and negation, on sense perception as an ultimate basis, and even verbal cognition and negation must be mediated to the soul by mind.

The soul, then, with the aid of the mind, is the enjoyer of all experience; the sense organs the instruments; the objects, external or internal, the world and the qualities of the soul; and the body is the abode of the sense organs and the mind, through whose instrumentality the soul has experience. Of bodies Prabhākara recognises three kinds only—womb-born, egg-born and sweat-born—omitting, with some Nyāya-Vaiśeṣika authorities, the vegetable body, on the ground that its possession of sense organs is not established, despite the Jain views on this topic. None but earth bodies are accepted by Prabhākara, though the Nyāya-Vaiśeṣika accepts the existence in other worlds of water bodies, fire bodies and air bodies; this excludes the Vedānta view, which finds in the body five or three elements or the variant which admits of four only. The body, however, in any event is essentially subservient to the soul, which acquires a body in accordance with its past deeds; in what manner this is accomplished neither Prabhākara or Kumārila tell us, for in truth the problem is incomprehensible.

So far the views of Prabhākara and Kumārila seem to be in general harmony, but there is a distinct discrepancy, if not a very important one, in their view of the manner in
which the soul is cognised. In the view of Prabhākara the
cognition is self-illumined, but this doctrine is not applicable
to the soul. The Vedānta view, of course, insists on the
document of self-illumination in the case of the cognition
and the soul as consciousness alike; Prabhākara objects that
in this case the soul must be present in consciousness
during the state of deep sleep no less than during the waking,
dreaming and fourth states, and, as all our consciousness
can be explained by hypothesis of the self-illumination of
cognition, it is needless to assume any other self-luminous
object. The Nyāya view, which makes the soul to be the
object of direct perception, as opposed to the Vaiśeṣika
document of the inferring of the soul, which is also found in
older Nyāya, is rejected by Prabhākara on the ground that
it serves to make the perceived also the perceiver, which is
in his view absurd, a position for which there is clearly
much better ground than in the cognate case of the denial
of the mental perception of cognition. The theory which
he adopts is, then, simply that in every cognition the soul
teents into the cognition as a necessary element, and, therefore,
in a sense the soul is cognised by the same means of valid
cognition as the objects which it knows. But, while the
soul is thus cognised, it is not cognised as a true object; it
is cognised as the agent in cognition, just as a man who walks
is the agent of walking, not the object. The soul, therefore,
is the substratum of the self-illumined cognition, into which it
teent in the element of "I," and this fact explains why in
deep sleep there is no self-consciousness, since at that time
there is no cognition, and the soul can be known only along
with a cognition. But the fact that there is no cognition
does not mean that there is no soul: consciousness is not, as
in the Vedānta, the essence of the soul, but a mere quality
of it, and in the state of liberation the soul remains eternally
existent, though by ceasing to have cognitions it ceases to be
cognised. While this view of the knowledge of the soul in
self-consciousness is ingenious and not unhappy, laying as
it does due stress on the necessary implication of the self in
consciousness, it is a little difficult to see why Prabhā-
kara did not admit that the soul was self-illumined, which
is certainly the natural interpretation of the Śabarabhāṣya
(p. 22). That term seems to apply more readily to the soul than to cognitions on his own theory, in which the cognition seems really to be inferred, as it actually is held to be by the school of Kumārila.

How far Kumārila really differs from Prabhākara in these views is not clear. He certainly is credited by such texts as the Šāstradīpikā (p. 101) and the Sarvasiddhāntasaṃgraha (VIII, 37) with the view that the self is the object of direct perception by the mind, a view ascribed by the Nyāyamañjarī (p. 429) to the Aupavārṣas,¹ and this is perhaps a legitimate deduction from the doctrine, which he certainly held, that the existence of the self is established through the notion of "I." The soul he holds to be the substratum of the "I" element in cognition, and this appears to be practically identical with Prabhākara’s view that the soul is the substratum of the self-illumined cognition, and the "I" element in it. Kumārila, however, adopts in the Tantravārttika² the doctrine that the soul is pure consciousness, though he distinguishes it from cognition, but this characteristic is hardly more than a verbal deviation from the view of Prabhākara, as far as practical results go.

Prabhākara and Kumārila are agreed as to the fact of there existing a multitude of separate souls, as is the necessary supposition of the Sūtra and the theme of the Bhāṣya. The perception of another soul is obviously impossible, but one sees the activities of other bodies, and infers thence that they must be ensouled, just as one’s own body is ensouled. Thus, if a pupil has learned half his task in one day, the fact that he continues to learn the next half the next day is a good ground for assuming that he possesses a soul. The same result can be arrived at from the fact that merit and demerit are infinitely various, and not one, as they must be if there were one soul only. The objection that pain is felt as localised, though there is but one soul in the body, is met by insisting that in reality the feeling is in the soul, and it is only the cause of the pain which can be said

¹ Cf. Mānameyodaya, p. 80. But in Ślokavārttika, p 525 (vv. 142, 143), he seems to accept self-illumination from the Bhāṣya.
² Trans., p. 516; so Ślokavārttika, p. 187 (v. 167).
to be localised. The further Vedānta contention, that the sun, though one, appears by reflection in different substances to be endowed with diverse qualities, is also rebutted by the observation that the qualities, which appear different, do not really belong to the sun but to the reflecting medium. On this analogy the different qualities appearing in connection with the soul would belong to the bodies which are ensouled, and this conclusion is manifestly contrary to fact, since cognition, etc., are qualities, as we have seen, of soul, not of body. It is characteristic, however, of the tendency to import Vedānta conceptions into the Mīmāṃsā that the Sarvasiddhānta-saṅgraha (VIII, 39) asserts categorically that there is one real supreme self, of which the individual selves are unreal differentiations.

Such being the nature of the soul of man, his normal lot is to continue in an unending cycle of lives, each determined from the outset by his actions in previous lives, unless he adopts the path which leads to freedom from this round of existence. The process of this liberation is sketched by Prabhākara; first the man becomes disgusted by the troubles which attend this mortal life; then he realises that even the pleasures of this life are inseparable from pain, both in their attainment and in their disappearance; accordingly he devotes his mind to seeking final release from all worldly things. To this end he abstains from all prohibited acts, which lead to punishment hereafter, and also from all acts which are undertaken for the purpose of attaining some worldly or heavenly guerdon. He also exhausts the accumulated store of his merit and demerit by undergoing the experiences which result thence. Finally he destroys the receptacle of experience by the knowledge of the soul, together with such concomitants as contentment, self-restraint and so forth, all things enjoined by the scriptures to prevent the return of the soul. When all this is accomplished, then the achievement of release is brought about. Prabhākara insists that, as the texts enjoin the knowledge of the soul for no ulterior purpose, it must be understood that the absence of rebirth is the reward of this knowledge. Liberation thus consists in the cessation of the operation of merit or demerit, and in total freedom from the body.

without cognition or feeling of any sort. This view, though in entire harmony with the Mīmāṃsā, has suffered the usual fate at the hands of the later texts,¹ in which it is asserted that the final condition of man is a state of constant bliss.

In what manner then does the performance of sacrifice operate as affecting the soul? The Mīmāṃsā in both schools is confident that there is no question of rewards coming from the deity to whom the offerings are made; no deity is either eternal or omnipresent, and there could be no assurance of it ever receiving the numerous offerings made by diverse votaries, apart from the difficulty of the deity conferring rewards. There must, therefore, be a capacity, which does not exist prior to the sacrificial action, either in the principal performance or in the agent, but which is generated in the course of the performance. Before a man performs a sacrifice, which will lead to heaven, there is an incapacity in the offering and in the man himself to secure that result, but, when he has performed it, he becomes, as a result of the action, endowed with a potency, styled Apūrva, which in the course of time will secure for him the end desired. The existence of this potency is testified to in the scriptures; its necessity is apparent by the means of proof known as presumption. We find in the Veda assertions that sacrifices produce certain results, and, as the operation of the sacrifice, as we see it, is transient, the truth of the scripture would be vitiated if we did not accept the theory of Apūrva. Nor is there anything illogical in the doctrine; every action sets in force activities in substances or agents, and these come to fruition when the necessary auxiliaries are present. The action specified is called into existence by the injunction contained in the form of an optative in a sentence in the Veda.

From this doctrine Prabhākara dissents, elaborating instead a theory which is obviously a refinement on the simple view which Kumārila accepts from the older writers of the school and which best suits the Mīmāṃsā Sūtra.² In his opinion the injunction rests in the sentence as a whole,

¹ Mānameyodaya, p. 88.
² II, 1, 1 ff; Prakaraṇapaścikā, pp. 185 ff; Tantravārttika, II, 1, 1-5.
not in the optative verb, and he denies that from the action there arises directly the Āpūrva. On the contrary, the process is that the injunctive sentence lays down a mandate, Niyoga; this excites the man to exertion, and this exertion pertains to some form of action, indicated by the verb of the injunctive sentence. The exertion produces in the agent a result (kārya) to which also the name of Niyoga is given by Prabhākara, on the ground that it is this which acts as an incentive to the agent to put forth exertion towards the performance of the action denoted by the verb of the injunctive clause. The Niyoga, however, is unable to produce its result, unless aided by something which Śālikanātha styles fate, nor is it apparent that either in his terminology or in his view of the process Prabhākara's doctrine is any superior to that of Kumārila. It seems as if primarily it arose from nothing more important than the observation that the result produced in the agent was in one sense his motive to action as much as the sentence directing the action to be done, leading to a transfer of the term Niyoga, naturally applicable to the sentence, to the condition in the agent to which the more orthodox name of Āpūrva was usually applied.

In simple sacrifices there is only one Āpūrva produced, but in more complicated sacrifices there may be several, as a rule four. Thus in the new and full moon sacrifices, consisting of two sets of three oblations at new and full moon respectively, there may be distinguished the Āṅgāpūrva, pertaining to the minor acts of the several oblations; the Utapattyapūrva, the result flowing from each of the three oblations in either set; the Samudāyapūrva, the result of each group of three; and the Phalāpūrva, the result of the whole performance regarded as a unit. But it is not every action which brings about an Āpūrva; those actions, which are devoted simply to some material result, though a part of the sacrifice, such as the appointment of priests or the threshing of corn, are not credited with any such effect, as they serve an immediate purpose and need no further explanation.

In the view of both schools there is a clear relation between the injunction and the action of the agent; the former possesses a verbal energy (sābdī bhāvanā) in its tendency to produce action by the agent, while the latter puts forth
actual energy (ārthī bhāvanā) towards the end indicated in the injunction.¹

It is significant of the theistic tendency of Indian thought that even the Mīmāṃsā was not exempt from transformation. Despite its emphatic denial of the existence of a Supreme Lord, the Sarvasiddhāntasamgraha (VIII, 40, 41) treats the end of man as to be obtained by meditation upon, and worship of, the Supreme Spirit which is manifested in each man, and authors, such as Āpadeva and Laugākṣi Bhāskara, declare that if the sacrifice is performed in honour of Govinda or the creator, Īśvara, it leads to the highest good, basing this assertion on the authority of the Bhagavadgītā. Hence it is easy to explain the tendency of such works as the Seśvara-mīmāṃsā of the polymath Veṅkaṭeśa, where Vedānta tenets are grafted on the Mīmāṃsā. Guṇaratna, in his comment on the Śaddarśanasamuccaya (p. 298) similarly attributes to Jaimini acceptance of the Māyā doctrine.

The question, however, arises, how far, in accepting views of the future of the spirit, which are rejected by both Prabhākara and by Kumārila, and in imparting a theistic tinge to the doctrine, later texts relied on earlier authority, now lost to us. It must be remembered that in the Vedānta Sūtra there are attributed to Jaimini not merely views in entire harmony with his principles, such as insistence (IV, 1, 17) on the fact that works bear their due fruit without any divine intervention of any kind, but also opinions which show him in the unexpected light of a true Vedāntin, though not of the orthodox doctrine of Śaṅkara. Thus he is credited with the view that the order in which a man must pass through the various stages of life (āśramas) is fixed as from lower to higher, and never vice versâ, and as explaining away as metaphorical the assertion that the highest spirit is a span in size. More precise light is thrown on his doctrine by the fact that he adopted the view of the fate of the soul on departing, by which it is ultimately led by a spirit to Brahman, in the sense that the absolute Brahman is meant, though Śaṅkara argued, apparently against the

intention of the *Vedānta Sūtra* (IV, 3, 7-14) that the reference is to the lower Brahman, the soul passing to the higher state only on the occurrence of the absorption of the lower Brahman. In its final condition the soul possesses, according to Jaimini, all the qualities of the Brahman enumerated in the *Chāndogya Upaniṣad* (VIII, 7), together with omnipotence and omniscience, and further possesses a body and senses, having the power of assuming many diverse forms. Though this is not the view of Śaṁkara (IV, 4, 5, 11) it can hardly be imagined that Jaimini really regarded this condition as pertaining to the soul merely preparatory to final absorption in the Brahman; we may rather suppose that on this topic his views were akin to those of Rāmānuja, and perhaps of Bādarāyaṇa himself.

If we were to hold that the Jaimini of the Karma-Mimāṁsā and the Jaimini of the Vedānta must be regarded as enunciating one body of doctrine, we would be forced to the admission that the later school of Mimāṁsā departed from the principles of the founder of the doctrine by ignoring the fact that the *Mimāṁsā Sūtra* represented only one side of his thought. But to accept this would probably be to lay far too much stress on the traditional allocation of doctrines; it is far more plausible to assume that the views expressed in the Mimāṁsā do not represent one aspect of the thought of an individual sage, but are the expression of the doctrine of a school, which appealed to Jaimini and Bādarāyaṇa only so far as it thought fit to adopt or discuss views of theirs. It would otherwise be altogether too remarkable that of two authorities, who covered much the same ground, we should have preserved the Sūtra of one on the doctrine of action, and the Sūtra of the other on the nature of the absolute, and in both cases the form of the Sūtra is decidedly unfavourable to the view that it is the production of one definite author. The shadowy personalities of Jaimini and Bādarāyaṇa can hardly claim much more effective reality than those of Gautama or Kaṇāda, or even than Kapila himself.

If, on the one hand, there was a tendency to adapt the Mimāṁsā to theistic or pantheistic views, there was on the other a steady process of degradation of the deities to whom
the offerings were supposed to be made. It can hardly be assumed that these deities were not believed to be real by the founders of the Mīmāṃsā. And there is nothing to show that Jaimini did not accept their existence. But the later doctrine, as evinced in such works as the Devatāsvarūpavānicāra of Āpadeva, does not accept the validity of the descriptions of the deities given in the Purāṇas as showing the existence of such beings; these passages rank as mere Arthavāda; the deity is merely that to which offering is made, and has no existence beyond the Mantras addressed to it.
THE RULES OF RITUAL INTERPRETATION

We have seen that Prabhākara and Kumārila establish by their elaborate epistemological and metaphysical enquiries precisely the same results as were more simply accepted by Jaimini, the fact that duty or righteousness is inculcated by the Veda in the form of injunctions, which are to be carried out on the strength of the authority of that text as uncreated and eternal. The task of Jaimini, in all save the first Pāda of Adhyāya I, is, therefore, to lay down the principles which will enable men rightly to perform the actions which the Veda enjoins, but which the vast extent of the Vedic literature renders it difficult to determine. The task falls essentially under two great heads; it is necessary to determine precisely to what texts and in what degree authority attaches, and it is requisite to classify systematically the various forms of injunction with reference to the actions which they enjoin. Both duties are performed, though occasionally in somewhat haphazard manner, in the Sūtra; the more important one, the investigation of injunction, forms the main topic of many later works, while the compendia usually cover more or less adequately the whole field. The details of the discussions have necessarily little general value; they deal with incidents of sacrifices, which flourished only in the early days of the history of the Mīmāṃsā, and in many cases the labour devoted to their investigation cannot but seem to us mis-spent. On the other hand, the principles of interpretation developed are often both valuable and interesting as examples of logical analysis.

Of the Vedic texts the Brāhmaṇas afford the immediate material for the extraction of the injunctions which are the
essential part of the Veda, but they contain also passages which cannot be treated as dealing with either positive or negative injunctions, and are classed either as explanatory matter, Arthavāda, or name, Nāmadheya. The Arthavāda (I, 2, 1-30) at first sight seems not to be entitled to authority, but Kumārila and Prabhākara alike defend its validity, the latter against the charge that such sentences are inexpressive, since they are not construed with injunctive verbal forms. The value of the Arthavāda, both hold, lies in it either extolling desirable, or censuring forbidden, acts; it thus comes into immediate connection with injunction or prohibition. Hence it follows that, in cases where it might be possible to extract from an Arthavāda an injunction, it is needless to do so, the passage being adequately explained if it remains eulogistic of some action already enjoined. Arthavādas may be variously divided, but the simplest division is into three classes: the first is where in contradiction of some other means of proof a quality is asserted to exist, as in “The post is the sun,” which serves to extol the brilliance of the post. Or it may merely reiterate a truth known otherwise, as in “Agni is a protection from the cold.” Or it merely may refer to something which has happened, neither contradicted by other means of proof nor already known.

The case of name (I, 4, 1-16) is far more obscure; discussions regarding it usually turn on one or other of the sentences udbhidā yafeta pasukāmah, “he who desires cattle should sacrifice with the udbhid”; citrayā yajeta pasukāmah, “with the citrā”; agnihotram juhoti, “he offers the Agnihotra”; and śyenaḥbhicaran yajeta, “he who practices witchcraft should offer the śyena sacrifice.” It seems at least plausible to suppose that the subdivision owes its creation to the practical necessity of dealing with a limited number of obscure sacrificial terms, but was later extended into a wider area. In the developed theory,¹ the justification of the classification of name is given as follows. Each word in the injunction must be brought into effective

Thibaut, Arthasaṁgraha, pp. xii, xiii; Mimāṁsāyāyaprakāśa, pp. 85 ff.

Mantras were recorded in long paragraphs, with no obvious mechanical dividing marks. These principles are that of syntactical unity (ekavākyatā); those words must be taken together which, when so united, form a single idea, or, as Prabhākara puts it, to suit his theory of injunction, express a single purpose, and which, taken apart, are not expressive of any idea or purpose. Secondly, there is admitted the principle of syntactical split (vākyabheda), which permits us to break up what else might be taken as a single sentence into parts, each of which must contain a single idea. But this expedient is permissible only when there is a clear Vedic injunction to make the split, or when no other construction is really possible, for otherwise the error is committed of multiplying Apūrvas resulting from Mantras. None the less it is a necessary procedure in cases where it is made clear in any way that there are distinct acts to be accompanied by Mantras; "Pleasant I make this seat for thee; sit upon it" (T.B. III, 7, 5, 2) would primā facie be one Mantra, but, as it is intended to serve the double purpose of accompanying the act of making the seat for the cake, and setting it down, it must be taken as two. Thirdly, there is the principle of extension (anuṣaṅga), which denotes that it is often necessary in the case of Mantras to supply with several sets of words a clause which follows the last of these sets only, and which might thus be deemed to belong to it alone.

Authority, however, is not confined to the Vedic Śaṁhitās and the Brāhmaṇas. It is extended to the Smṛtis, in which term Kumārila⁴ includes primarily the Itihāsas, Purāṇas, and the Smṛti of Manu, these being works which claim universal application. The Itihāsas and Purāṇas he deems to contain injunctions based on Vedic authority and much Arthavāda, but he admits that there are also injunctions arising from mere worldly considerations, passages useful only to give pleasure, and other extraneous matter; the hymns to deities serve to secure a transcendental result. They serve as wholes the useful purpose of instructing men

¹ Tantravārttika, trans. pp. 25, 112 ff, 244. The Sūtra (I, 3, 1-7, 11-14) never mentions the word Smṛti and the commentators differ widely in their versions.
of very various capacity and knowledge. In the case of the Smṛtis proper only five alternatives are available: either they are completely erroneous, which is impossible, as these works are obviously useful and men are not so foolish as to believe nonsense; or they are due to personal observation, which cannot be accepted; or they rest on tradition, which would give no assurance of validity; or they are deliberately intended to deceive, which is incredible for lack of motive and probability of success; or, finally, they represent lost Vedic tradition. For this decision there can be adduced a certain corroboration in the fact that for certain statements in Smṛtis we can find confirmation in Vedic texts, whence we can assume that other statements were also derived from texts, now unhappily lost to us. Thus part of the Smṛtis is derived from the Veda, part from ordinary motives of life, and the story material is Arthavāda, as in the 'Itihāsas and Purāṇas. The view of Prabhākara\(^1\) is not essentially different; he also accepts the inference of Vedic authority, but expressly negates it in the case of Smṛtis which do not prescribe or prohibit any course of action, for example, statements that plants have souls, which contradicts his own denial of vegetable bodies. Both schools again agree (I, 3, 15, 16) in accepting as valid the Smṛtis of such authors as Gautama, Vasiśtha, Baudhāyana, Āpastamba, Śaṅkha and Hārita, despite the occurrence in them of passages laying down certain customs as practised by persons in the east, and so on, a fact which apparently contradicts the universality of the Vedic injunction. The decision of the schools is that their injunctions are truly universal, and even the Veda lays down certain practices as to be performed by certain classes only, for instance, the Rājasūya is a sacrifice for kings only.

The Vedāṅgas, or subsidiary treatises bearing on Vedic pronunciation, ritual, grammar, etymology and astronomy, are also admitted to rest in part on Vedic tradition, and the Mīmāṃsā and philosophic treatises generally are permitted to share in Vedic authority; thus Kumārila\(^2\) assures us that

\(^1\) Prakaraṇapāñcikā, pp. 100, 101, 150,
\(^2\) Ślokavārttika, p. 267 (v. 201).
the Buddhist denial of the external world was not really meant to be taken as a serious contradiction of its reality, but to divert men's minds from undue attention to it, and so with other apparently erroneous tenets. In the case of the ritual Sūtras the claim is made by some that they must be treated as true Veda themselves, but this is denied, for they have human authors, and are merely, like Smṛtis, based on Vedic authority. In the case of grammar, however, a really interesting discussion is raised on the Sūtra (I, 3, 4-30) by those who deny that it can be made out to rest on Vedic authority, and who go so far as to challenge the validity of the claims of the grammarians to be authoritative.

The argument of these unorthodox persons runs: words like gāvī, in lieu of the grammarians' gauḥ, for cow are perfectly correct; they are fully expressive, they are perceptible by the ear, they are as eternal as any word is, and no beginning in time for them can be traced. The science of grammar, too, has no Vedic connection; it differs in no way from the process of explaining vernacular words for everyday use; it does not deal with actions which are the sole business of the Veda; it serves no useful purposes in relation to duty, as we do not need grammar to tell us the meanings of words; nor is grammar the source of usage, since, on the contrary, it rests upon and follows usage. The reply of the Mīmāṃsā is not convincing; it maintains that synonyms are not permissible, unless enjoined by Vedic use; as gauḥ expresses exactly the meaning "cow," any variant of it is wrong and undesirable, and has such power of denotation as it may actually possess, merely because of its similarity to gauḥ and not in its own right. The science of grammar also is essential to set out in orderly derivation the vast masses of words in the Vedas; moreover, not usage alone, but usage and grammar determine whether a word has the correct form to convey the meaning, and grammar in the last issue is more authoritative than mere usage. That correct words produce, when used, a transcendental result is proved by the fact that the Veda enjoins their use, and forbids the use of barbarous expressions; moreover, truth leads to supreme bliss, and the use of correct words is truth in speech. Fortunately this disquisition does not prevent either Prabhā-
kara or Kumārila (I, 3, 10) from agreeing that, when the Veda uses a barbarous word, it is to be interpreted in the sense barbarian usage accords to it, in lieu of attempting to foist upon it an etymological sense. 1

The relation of Smṛti authority to the Veda, in cases where there appears to be conflict, is the subject of divergence of opinion between Prabhākara and Kumārila. In the view of the former, which is apparently that of the Mīmāṁsā Sūtra (I, 3, 3-4), if a Smṛti contradicts a Vedic passage, the former loses all authority, while, even in the case of Smṛti passages which do not thus offend, it may be impossible to accord their injunctions any spiritual value, if they seem to be due to the avarice of the priests, as when the giving of the cloth from the sacrificial post to a priest is enjoined by Smṛti authority. Kumārila, however, with his greater regard for tradition, reduces, as far as possible, cases of contradiction to mere instances where alternatives are permissible, and only holds that the Sūtra recommends in the case of such alternatives the adoption of that which has direct, and not merely inferred, Vedic authority.

Below the Smṛtis in value comes the practice of good men (I, 3, 8-9) or custom (I, 3, 15-23) on the simple ground that, while both must go back to Vedic authority to be valid, the former goes more directly to the fountainhead. In addition, however, to Smṛti and practise must be reckoned as sources of knowledge of duty the implications contained in Vedic texts, which may be deduced by us from them, even if not already set out in Smṛtis or by tradition.

The essential function of all these sources is to give us knowledge of injunctions (vidhi), and injunctions are excitements to actions. Actions may be classified in various ways; there is a clear distinction between Vedic and worldly actions, with the former alone is the Mīmāṁsā concerned. Actions of this type may be classed as positive, as negative (pratise-dha), or as partaking of both characters (paryudāsa), as in

---

1 Kumārila enlivens the discussion by giving a long list of errors in grammar committed even by grammarians, and similarly diversifies (I, 3, 7) his exposition of the practice of the good by an account of crimes attributed to gods and sages. On grammar, cf. Nyāyamañjarī, pp. 412-26.
the case of a vow not to look at the sun taken by a student. Of actions the sacrificial are the most important, falling under the three main classes of Yāga, the offering to a deity of a substance; Homa, the offering of a substance in fire or water; and Dāna, the waiver of one’s ownership of an object in favour of a third party. Sacrifices, again, can be divided according as they serve as archetypes only, like the Agni-hotra, or as derivatives (vikṛti), like the Māsāgnihotra, or as both, like the victim for Agni and Soma, based on the new and full moon sacrifice and itself a model for the offering at the Soma pressing; or as neither, like the Darvihoma, for special reasons given in the Sūtra. More important is the division by purpose; the Nitya sacrifices must constantly be performed at the due seasons; the Naimittika must be performed on certain special occasions, as the Jyotis offering on the approach of spring, while the Kāmya offerings are optional, being undertaken by a man who desires some special end, as in the case of the Kārīrīṣṭi performed to obtain rain.

The direction to perform an offering is laid down in an originating injunction (utpattividhi) or an injunction of application (viniyogavidhi), according as the matter concerned is a principal or a subordinate offering. In either case, it is frequently necessary to ascertain precisely how many actions are prescribed, and six rules for this purpose are laid down by the Mimāmsā (II, 2 and 3). Difference in words is one clear indication, especially in the case of the verb, which is the most important part of a sentence of injunction; the repetition of the verb indicates distinct offerings; the mention of a definite number of oblations is clear evidence; other sources are the difference of names; of materials to be used, and of context. In the case of the last item it is agreed that the occurrence of the same offering in two different recensions of one text, as in the case of the Kāṇva and Mādhyāmdina texts of the Śatapatha Brāhmaṇa, does not constitute a diversity of context.

The originating injunctions are few in number, relating as they do to the principal Vedic offerings only, such as the

1 Mimāmsābālaprakāśa, pp. 81 ff; Mimāmsāparibhāṣā, pp. 17 ff.
Agnihotra, the new and full moon sacrifices, the Soma sacrifice, and so forth. It might have been expected that there would have been made some effort to systematise these offerings, but no trace of any attempt to effect this end is seen in the Mimāmsā, which accepts the sacrifices from the sacrificial tradition. It is true that there is a certain degree of order of progress from the simpler to the more complex, but this order is not absolute, being broken by the necessity of performing the Naimittika offerings on the occurrence of the special occasions which evoke them. Nor is there any principle discernible in the rewards attainable by these offerings; they include such material things as wealth, usually in cattle, children, long life, rule, and, most frequently of all, heaven, which is held, on what is known as the Viśvajit principle (IV, 3, 10-16), to be the reward promised in any case in which no specific boon is laid down.

The originating injunctions, however, do no more than excite in the mind of the hearer the desire to perform the action which they enjoin, generally in the form of a sacrifice; it remains for other injunctions, those of application, to denote the exact manner of procedure (itikartavyatā), by specifying the numerous subsidiary actions requisite, and the materials and other necessaries for the performance. The discrimination between what is principal and what is subsidiary (sēsa) occupies the greater part of the attention of the Mīmāmsā, and it stands in a close relation to the motive for the performance of the various actions. Actions may be undertaken according to the Sūtra (IV, 1, 1 ff), followed by Śabarāsvāmin, Prabhākara, and Kumārila, either for the sake of the agent (purusārtha), or for the sake of the offering (kratvartha), while Pārtha-sārathi adds a third class of those which are neither for the one purpose or the other, giving as an instance the Agnyādhāna, or piling of the sacred fire. This innovation seems to be without warrant; the original distinction corresponds roughly to that between principal and subordinate actions; the new and full moon offerings serve to benefit man by producing a due reward, while the fore-offerings, which form part of them, are merely subsidiary to the sacrifice; materials normally are subsidiary to the sacrifice,
any good results mentioned being treated as merely Arthavāda, though on occasions a thing like curds, which serves as an element in offerings, may be used to make efficient the sense organs of the sacrificer, and thus to serve for his benefit. The last instance shows that the correspondence between actions for the benefit of the agent and principal actions is by no means complete.

The question of what things can be subsidiary is the subject of an elaborate investigation; according to Bādari’s opinion, cited in the Mīmāṁsā Sūtra (III, 1, 3), the only subsidiaries are substances, accessories, namely, the Mantras and the deities, and purificatory actions, such as the threshing of corn. To this list Jaimini adds actions or sacrifices generally, results, and agents. The distinction between the two sets, according to the Vṛttikāra, whom Śabararsvāmin cites, is that the first three classes are essentially in their nature subsidiary, while the latter three are in one sense principal, in another subsidiary. Thus the sacrifices are principal with reference to the materials, but subsidiary to the result; the result is principal with reference to the sacrifice, but subsidiary towards the agent; the agent, again, is principal with regard to the result, but subsidiary to such acts as the measuring of the sacrificial post, which is to be related to his height. From another point of view the agent may be said to be subsidiary to the sacrifices, since it is to perform them that he acts.

Prabhākara divides the subsidiaries into four classes, according to the heads of class (jāti), quality, substance, and actions, denoted by verbs (bhāvārthātmaṇa). The last head he divides into those actions which are directly conducive to the fulfilment of the sacrifice (samnipatyopakāraka), and those which are more distantly conducive to this result (ārādupakāraka). The former he classifies in four divisions; the bringing into existence (utpatti) of some object, as the production of dough by kneading the corn; the obtaining (prāpti) of a substance already in existence, such as milk; the modification (vikṛti) of a substance, as of

1 Prakaranaṇaṇcikā, pp. 202 ff; cf. Mīmāṁsānīyapakāsa, pp. 62-67, where the division is twofold, siddha and kriyā.

syntactical connection is of value; thus, in one passage (Ś.B. IV, 4, 6, 16-18) we are able to decide that Ṛc and Yajus mean the Ṛgveda and the Yajurveda, and not, as might else be thought, metrical and prose Mantras, because of the syntactical connection with the immediately preceding words. Fourthly, context (prakarana) is of great importance; we have the general injunction that one should perform the new and full moon sacrifices, and the injunction to offer to Tanūnapāt; this principle enables us to find a purpose for the latter offering in connection with the former sacrifices; mere syntactical connection would not here help, as the sentences stand apart and are in themselves quite complete. Fifthly, order (krama) or position (sthāna) is of service; thus in one passage (T.S. I, 6, 2, 4) occur three Mantras without indication of use; we can, however, by finding that elsewhere three offerings are enjoined in connection with these Mantras, assume that the order of the sacrifices and the Mantras is to correspond, one being used with each offering in order. Finally, names (samākhya) may supply information else wanting; thus Mantras, not otherwise identified, by being styled Hautra are known to fall within the sphere of the Hotṛ priest. Each of these means for adequate reasons is deemed to be of more value than the preceding, and in working out the principle in detail the Mīmāṃsa shows both skill and acumen, even when we admit that in many cases its reasonings were guided by the fact that a certain usage had become regular, and therefore that the sound conclusion was already given by customary practice.

While these injunctions of application determine the exact mode in which the ceremonies prescribed in the originating injunctions are to be performed, the order of the actions is prescribed by injunctions of performance (viniyoga-vidhi). On this point, however, there is a difference of view between Prabhākara and Kumārila (V, 1); the latter admits readily the existence of injunctions determining the order of performance by the process of extracting such directions from injunctions of application. Prabhākara, however, insists that an injunction of application cannot be deemed to deal with order, which is a matter of indifference,
so long as an act is performed, but even he admits that a few cases occur in which the order of offerings is specially defined. As a rule, however, the order is left to be determined by minor indications. Thus it may be directly enjoined, or the order of the mention of the offerings may be decisive, or the order of the natural actions may be resorted to; thus the gruel must be cooked before the Agni-hotra is offered, although the text mentions the latter first. Again, the order of commencement is of importance; in the Vājapeya there are seventeen victims to be immolated; the offerer may begin with any one, but the different acts must be done to each following the initial order adopted. Position, again, is of importance; thus in the Agniṣṭoma there are three animal victims, one to Agni and Soma offered on the day before the sacrifice, the Savanīya on the day of the pressing of the Soma, and a barren cow on the final day. In the Sādyaskra, a modification of the Agniṣṭoma, the three victims are to be offered on one day, that of the pressing; hence, as this is properly the day of the Savanīya victim, it is to be offered first, followed by that for Agni and Soma, and the barren cow. Lastly, the order of the principal actions prevails over that of subordinate actions; thus at the new moon sacrifice the preliminaries for the offering to Indra are performed before those of the offering to Agni, but the offering to Agni comes before that to Indra: accordingly, in the performance of subsequent rites, it is those connected with Agni that take precedence over those connected with Indra. In cases where none of these means give a clear result, any order may be resorted to, and so with offerings performed independently to obtain worldly goods. Nor is there any fixed order between the Soma sacrifices and the simpler rites known as Iṣṭis.

There remains the question of the right to perform sacrifices, which forms the subject of a set of injunctions relating to qualification (adhiṣṭārvidhi). Jaimini, it seems, took a generous view of the position of woman, contemplating (VI, 1, 6-8) her as a performer of sacrifices, though, in the case of her being married, both she and her husband must co-operate in offering, and the Vedic Mantras would be recited by him only. Śabaravāmin already
emphasises the disability of women arising from their ignorance of the Veda, which is not asserted by Jaimini, who doubtless reflects the older usage. Śūdras are excluded (VI, 1, 26, 33) from sacrificing for this very reason of ignorance of the Veda, and in the later texts the admission of women even to a qualified share of the sacrifice is thus anomalous. Some small amount of means is also requisite in a sacrificer, and he must not be incapacitated by disease. Further details are given in the Śrauta Sūtras, which recognise, like Jaimini, the case of certain classes who can take some part in sacrifice though not of the three higher classes, such as the Rathakāra. In the case of Śattras only Brahmans of the Viśvāmitra family studying the same Kalpa Sūtra are qualified to act; all act as sacrificers, and each individually obtains the whole benefit of the sacrifice, instead of it being shared collectively. Moreover, while the death of an ordinary sacrificer destroys the rite, in the case of a Sattra the place of any one incapacitated can be taken by another priest, who, however, obtains no share of the result. Only Brahmans again can eat the remnants of sacrifice, so that, if a Kṣatriya has a Soma sacrifice performed for him, he must be given to drink a substitute for Soma remnants. On the other hand, the threefold duty of sacrifice to the gods, of Vedic study as payment of debts to the Rṣis, and of the begetting of children as a debt to the Fathers, is incumbent on all these classes, not merely on those who may wish to attain the benefits of these actions (VI, 2, 31). Again he only may perform the Viśvajit (VI, 7) who can afford a fee of 1,200 gold pieces, but, when he is bidden to give up all in it, that applies only to his riches, not to, e.g. his parents, and of his riches there are excluded lands, horses, and slaves in personal attendance, while the 1,000 years of performance is interpreted as so many days.

In addition to these divisions according to content injunctions can be classified on the basis of the knowledge already possessed by the agent of the mode of performance or actions possible.\(^1\) Thus an original injunction (apūrva-

prohibition would not be what was desired, since, owing to the equal validity of all Vedic sentences, the only result would be to make the action optional. Thus, instead of a prohibition, we have what is technically styled a Paryudāsa, and the sense of the rule is that the words, "Ho, we sacrifice," which are uttered with the sacrificial verses, are to be uttered with those verses only which do not occur in Anuyājas.

These are the main topics, which, with numerous excursions into subsidiary detail, fill Pādas II-IV of Adhyāya I and Adhyāyas II-VI of the Mīmāṃsā Sūtra. The next two Adhyāyas deal with the transfer of details from the archetype to sacrifices whose form is derived from it, a discussion rendered necessary by the fact that in the Brāhmaṇas there are many cases in which it is presumed that the details of one offering will be supplied from another, as in the often-quoted case of the Iṣu offering which is based on the Śyena. The transference (ataideśa) applies not merely to the mode of performance, but to materials and other details.¹ It is regulated by context (prakaraṇa) or position; thus the Iṣu offering follows the Śyena model, because they are enjoined in the same context. The rule of position again lays it down that the deity of the original offering is to take the same place in the transferred offering, and the offering material is also to be transferred. Transfer takes place by express injunction, as in the case of the Iṣu offering; by implied injunction, as in the case of the offering to Sūrya, which is based on the new and full moon offerings; by mention of the name of a sacrifice, as in the case of the Māsāgnihotra, which is made in accordance with the Agnihoṭra; or by mention of the name of a purification (saṃskāra), as when, the Avabhṛtha being mentioned at the Varunapraghāsa, it is performed like the Avabhṛtha, or concluding bath, of the Agniṣṭoma where the rite is purificatory.

The process of transfer, however, frequently involves modifications (ūka) in the Mantras used to accompany the rites, in order to adapt them to the change of circumstance.

¹ Prakaraṇapañcikā, p. 227 (v. 13).
Elaborate rules are accordingly given in Adhyāya IX of the Sūtra on this head. Nor only Mantras are altered, but also Sāmans; thus at the Vaiśyastoma the Kanvarathantarā replaces the orginal Brhat and Rathantara Sāmans. In some cases purifications are modified; thus the wild rice (nīvāra) used at the Vājapeya offering, in place of the ordinary rice, is subjected to the processes of purification applicable to the latter. In other cases Mantras are not altered, but the number of times of their use is modified.

In other cases the transference must be accompanied by the annulment of details which are now inappropriate. The cases in which this occurs, enumerated in Adhyāya X, are numerous and complicated; thus an act may by change be rendered useless; in the Prājāpatya rite, based on the new and full moon sacrifices, grains of gold replace rice grains, and the operations of husking and washing are therefore annulled. Again, if Yajus Mantras are given to be recited as Nigadas, which are invitations and therefore must be said aloud, the normal rule of muttering of Yajus Mantras is annulled in favour of the necessary loud utterance. Annulment, again, may be partial or complete, and the later text books take special pleasure in developing the diverse forms in which it may appear. Opposed to annulment is combination (samuccaya) in which the new details of the derivative form are only added to the details of the original offering.

In Adhyāya XI the question is raised of the relation of subsidiary to principal offerings as regards repetition of performance. In certain cases a single performance of subsidiaries gives effective aid to more than one principal action, as in the case of the Agnyādhāna, which need only once be performed, the same consecrated fire serving for all subsequent sacrifices; this aid is styled Tantra. On the other hand, some subsidiaries must be repeated with each principal offering; thus the subsidiaries of the rites performed at new and full moon respectively in those offerings are nearly the same, but the lapse of time between the two rites renders the repetition of the subsidiaries essential; this case is styled Āvāpa. But in some cases where a subsidiary is merely performed for the purpose of aiding one
principal operation, it may nonetheless aid also another principal operation; thus the fore-offerings for the victim to Agni and Soma at the Soma sacrifice serve for the cake offering also, and, if an altar has been made ready for a Soma sacrifice, the sacrificer may perform an Iṣṭi with it, if he will. This form is termed Prasaṅga.

Finally, in Adhyāya XII the topic of options (vikalpa) is disposed of; options are of many kinds,¹ indicated by reasoning, or by direct declaration, or depending on the wish of the agent; nineteen subdivisions of each type are made, of which eight depend on the option furthering the performance of the rite, and eleven on its bringing about some benefit for the agent. By another principle of division options are classed as limited or fixed (vyavasthita) and unlimited (avyavasthita), each class again being subdivided according as it rests on reasoning or declaration. But options as a rule are open to many objections, though this defect does not apply either to fixed options, or to those which depend on the will of the agent. The subjects to which options may apply are most varied, the use or non-use of certain Mantras, preference for one colour or another, the choice of kinds of grain, mode of action, and so forth.

with which his father, Śaṅkara Bhaṭṭa, had dealt. The parallelism, indeed, of the two enquiries only became the more salient as with the course of time the number of Smṛtis and other texts claiming authority increased, and the ideal of reconciling their conflicting views was more and more strongly held. All the devices necessary for such an end existed in the Mīmāṁsā, and we can understand from this reason why it was not thought necessary or desirable to develop a distinct science of legal interpretation.

Thus the essential doctrine of injunction in civil law is based on the principles adopted in the Mīmāṁsā, and in the interpretation of the various kinds of injunction the civil law adapts to its own special needs the maxims of the sacred law. The distinction between injunction proper and a restrictive injunction (niyama) is applied in the sense that the latter is reduced to nothing more than a maxim or rule, which ought to be regarded, but which, if violated, does not render the action affected invalid; thus Manu's rule as to marrying an amiable and healthy girl is not an injunction, the violation of which renders void the marriage, but a counsel of prudence. The case of an injunction of limitation (parisamākhyā) raises difficulties, as there arises in regard to it the question whether or not it is to be deemed to imply a prohibition; thus, when the injunction is laid down that the sons may divide the family property on the death of their parents, Jīmūtavāhana puts the question whether it is to be inferred that they may do so only on the death of their parents, a view which he rejects.

Negative injunctions also raise a point of legal importance in the relation of prohibition proper, and a mere exception (paryudāsa). Thus the general law of the succession of a son and other heirs is subject to the exclusion from succession of persons impotent, outcaste, lame, blind, and suffering from incurable diseases, who are entitled to maintenance merely. The negation in their case is essentially to be treated as an exception to the general rule of succession; it, therefore, applies only to persons so circumstanced at the moment when the succession would normally vest, and, therefore, if successors become so afflicted after becoming entitled to the succession, the rule does not in any
way affect them, as, of course, it would do if it were a prohibition proper.¹

In the interpretation of the Smṛti injunctions the same principles are applicable as in the case of the interpretation of the injunctions of application in Vedic texts. Thus the express declaration of a text must be held to override any conclusion which might be deduced from it by suggestion (lakṣaṇā), corresponding to liṅga in Jaimini. The declaration of Manu (IX, 104) that "after the death of father and mother the sons should divide the paternal property, for they have no power over it while their parents live," is an absolute declaration that they have no such power; it is impossible to read the rule as forbidding partition during the parents' life, but acknowledging the power of the sons over the property. The power of suggestion, however, has also its own place; thus Nanda Paṇḍita in explaining how, although the word "substitute" was first applied specifically to five kinds of sons, it becomes applicable to all the twelve kinds legally recognised, adduces the Prāṇabhṛt maxim (I, 4, 28) as his warrant. Prāṇabhṛt originally denotes a Mantra used in consecrating a brick in the fire altar; thence it passes to be the name of the brick, and from denoting the special bricks used applies more generally to any brick. The principle of syntactical connection (vākya) reappears, usually under the title Anvaya; its superiority to context (prakaraṇa) is illustrated by Raghunandana's discussion of Manu's rule (XI, 209) that one who assaults a Brahman must undergo the Kṛchchra penance. If the context is invoked, this may seem merely to refer to the case of the new and full moon sacrifices, and therefore has no general or civil application, but the sound view is that it is to be treated as a single independent proposition.

The term, Arthavāda, which plays so important a part in the Mīmāṁsā discussions is dropped in legal terminology, but the legal texts recognise the existence of such passages in the Smṛtis and deal variously with them. One difficult problem is handled in the light of the maxim of Jaimini (I, 2, 19-25), dealing with declarations which have the

¹ Tagore Law Lectures, 1905, pp. 332, 333.
appearance of being injunctions but are not really so (vidhivannigadādhikaraṇa). Thus Jimūtavāhana¹ is enabled to hold that the text which provides that, "Though immovables or bipeds have been acquired by a man, no gift or sale of them without the assent of his sons," is to be completed by the words, "should be made," and not by the words "must be made." This interpretation reduces the sentence to a mere pious opinion, and avoids contradiction with the well-known injunction, which allows a man absolute power of disposal over property acquired by his own exertions, as opposed to ancestral possessions. The same maxim, however, has been interpreted as supporting the general rule that an injunction for which a reason is adduced is merely equivalent to an Arthavāda, so that Vasiṣṭha's rule against the adoption of an only son is reduced to a pious expression of opinion, because it is followed by the explanation that a son is one who saves from hell his natural father, a fact which makes the adoption of an only son undesirable. The Mimāṃsā rule, however, goes no further than to hold that, if for a rule which has no known Vedic sanction a selfish motive can be seen, it is impossible to postulate for it the authority of a Vedic text, and the supposed rule of law is clearly too widely stated.

The obligation of law to the Mimāṃsā extends to every department of the topic, and it not merely in matters of interpretation that the legal writers borrow matter from the Mimāṃsā, but they show repeatedly traces of influence by the positive doctrines of that school in their bearing on the religious aspect of property and family rights. The doctrine of the three debts of man, sacrifice to the gods, study to the Rṣis, and the begetting of a son for the Fathers, enunciated by Jaimini, affords three presumptions which, more or less effectively, are taken into account by the schools of law. In treating the principle of succession Jimūtavāhana uses, as a guiding principle in reconciling the conflicting statements of the Smṛtis, the principle of securing as far as possible spiritual welfare, and in interpreting the rules regarding

his all, his children are excluded from the gift. The same passage is also employed to express the limited character of the ownership of a king or a feudatory; his actual ownership is restricted to whatever property he has acquired; his position towards the territory is one of sovereignty or suzerainty, entitling him to a maintenance but not to true ownership; when a king is said to give a village, he does not transfer the ownership of the land, which is not his to give, but assigns to the donee the right of drawing a maintenance from the village.

The Mimāmsā also affords guidance to Vijñāneśvara (II, 136) in a variety of details in connection with heritage and partition. The claim of woman to inherit is questioned on the ground that, as property is intended for sacrificial purposes and as save along with her husband a woman has no locus standi as a sacrificer, on the interpretation of the Mimāmsā Sūtra (VI, 1, 17-21) adopted in the commentators, there is no ground for her having the right of inheritance. This illiberal doctrine is disposed of by appeal to another passage of the Mimāmsā Sūtra (III, 4, 26) in which it refers to ornaments of gold worn by the priests and the sacrificer, though serving no sacrificial purpose. The exact share of a wife raises difficulties in view of the conflicting interpretation of the two main texts, the first of which provides that, if an owner divides property in his lifetime, he should make his wives have equal shares with his sons; and the second, that on partition after the death of the husband the wife should have a share equal to that of her sons. These passages are interpreted by some authorities to mean that, if the property is extensive, she is to have a mere subsistence from the estate, while, if it is small, she is to have an equal share. This view is rejected on the strength of the principle upheld by Jaimini (VII, 3, 19-25) that, so long as a text can yield a single coherent meaning, it is not right to treat it as broken into two incongruous parts. Similarly it is on the Mimāmsā rule (V, 1, 4-7) of following the order of things mentioned in a certain order that is based the claim that, when the parents of a childless son succeed to his property, the mother has a prior claim, because the term parents (pitarau) is explained in grammatical treatises
as mother and father (mātāpitaraṇu), and not as father and mother. Another appeal to the Mimāṁsā doctrine is made in regard to Yājñavalkya’s doctrine (II, 126) that a coparcener, who at the time of partition withholds part of the property, must give it up for division. The question arises whether the action is reprehensible or not, and is decided in the affirmative because in the Mimāṁsā (VI, 3, 20) it is ruled that a man who substitutes one form of meal for another, even if acting under a genuine misapprehension, still does wrong, so that, even if the coparcener had some right to the property and regarded it as his own, his conduct is censurable. Jīmūtavāhana, as often, differs in part from Vijñāneśvara, and extenuates the action. On a strict interpretation by Mimāṁsā principles again, it is not impossible to argue that Jīmūtavāhana does not allow the disposal by will by a father of inherited property without provision being made for the maintenance of the sons; the conflicting view of the Privy Council is clearly hard to reconcile with the principles of Mimāṁsā.¹

Adoption, like inheritance, affords a fruitful field for the application of Mimāṁsā principles.² The right of a Śūdra to adopt, which is denied in the Śuddhiviveka, on the ground that adoption must be accompanied by Vedic Mantras and an oblation which he cannot as a Śūdra have performed, is vindicated on the ground of the occurrence of a certain offering for a Niśādasthapani (VI, 1, 51) in the Veda, although a Niśāda is normally as a Śūdra excluded from any Vedic rite. The Mantras can then be recited by an Aryan. A woman, again, can only adopt with the permission of her husband, as she cannot by herself perform Vedic rites and ceremonies (VI, 1, 6). Again, a child when adopted cannot inherit his father’s property or perform his Śrāddha, according to Manu; this rule, though restricted to these two facts, must be understood to apply generally on the analogy of terms like antarvedi in the Mimāṁsā (III, 7, 13, 14), which means not merely at the centre of the altar, but anywhere within it. By another maxim Nīlakanṭha decides that

¹ Tagore Law Lectures, 1905, pp. 405-11.
Śaunaka's text, which asserts that the son of a daughter and the son of a sister are adopted by Śūdras, is to be read to mean that these adoptions are generally permissible, and that they are specially so in the case of Śūdras: the maxim used is the Maitrāvaruṇa, which rests on the interpretation of the two sentences, "He hands over a staff to the Maitrāvaruṇa priest; he initiates or invokes by means of the staff." The accepted opinion is that the handing over of the staff is a distinct injunction, the initiation or invocation subsidiary, and so here the part of the Śūdra is only subsidiary to an established rule. Śaṅkara Bhaṭṭa, his father, whom Nilakaṇṭha cites, expressly applies to the Śūdra the duty of paying his debt to the Fathers, which is asserted of the Brahman as an instance in the Mīmāṃsā Sūtra.

Similar use of the Mīmāṃsā is made in the same connection by Nanda Panḍita in the Dattakamīmāṃsā (c. 1600 A.D.). Thus on the analogy of the Vaiśvadeva, which is a maxim (I, 4, 13-16) laying down that in the case of such a word as that the conventional sense is to be followed in lieu of the etymological, he holds (VI, 27) that the term sapinda used of relationship is not to be restricted to the exact meaning suggested by the word as a compound. So also, in order to meet the objection of Medhātithi to an adopted son on the ground that the duty of man is fulfilled only by begetting a son, he adds (I, 41) the maxim (VI, 3, 31) of the substitution of the Pūtika for the Soma plant. In determining the value of substitution the mode in which the substitute originated is unimportant, the question is whether it can serve its purpose adequately, and this an adopted son can easily do. Again, the objection to the rule that an adoptive father must perform the birth ceremony for an adopted child, though adoption is permitted up to the fifth year, is met by the use of the maxim (V, 4, 5-14) that, when a difficulty arises as to the order of performance of offerings, reason and necessity must be consulted, whence it follows that the performance of the birth ceremony is in order though tardy. The author of the Dattakacandrikā similarly appeals to the Mīmāṃsā doctrine (IV, 1, 22-24) of the relation of the principal and incidental aspects of an action, in order to support his view that, if one of two co-widows adopt, the

other occasions reduces a plural to its bare meaning of three.

Even more interesting is a case in which the law of evidence is influenced by the Mimāṃsā doctrine of the self validity of cognitions. Yājñavalkya lays down (II, 80) that, if a man has brought forward witnesses, yet if at a later period he can produce more satisfactory testimony, the evidence already adduced is to be discredited. This procedure, at first sight drastic, is justified by the adduction in the Mitākṣarā of the arguments adduced by the Vṛttikāra in support of the self-evidence of cognitions. Evidence is prima facie valid, unless it can be shown that the witness could not have known the facts, that his means of knowledge were defective (kāraṇadōṣa), or his evidence is displaced by other evidence, that is, the first cognition is sublated by a second cognition. Immediately after, Vijñānesvara (II, 83) has recourse to the Mimāṃsā to provide a suitable penance for the witness whom he enjoins to withhold evidence or testimony, where the proof of the charge would result in the infliction of the capital penalty; in these cases the usual punishment of a fine, or in the case of a Brahman banishment, is not in point; still, to do away with the sin of the deviation from the truth the performance of a special offering, the Sārasvateśṭi, given in the Mimāṃsā, is prescribed.

As is natural, the obligations of the law books to the Mimāṃsā principles are still more marked in those parts of those treatises which deal, not with civil law (vyavahāra) in the narrower sense of the term, but with religious custom and penances. Even in the civil law, however, there is one point on which the law books differ in essentials from Jaimini; it was necessary for the latter, in support of his doctrine of the eternity of the Veda, to maintain that its commands are universal, and thus he treats even Smṛti texts which contain injunctions expressed as local practises as really laying down general principles. In the practical needs of the law, however, the utmost value is always attached to local customs, and the practice of good men, which thus in effect comes to outweigh maxims in Smṛtis, if in any place these are not followed. Yet
Jaimini's insistence on the supreme value of the Veda in all questions was not without effect; the tendency in the Smrītis is, in harmony no doubt with a common practice, to allot in the case of partition of property a larger share to the eldest son than to the others. But there is Vedic authority for the statement that Manu divided his property in equal shares among his sons, and this doctrine has finally prevailed in the law, despite the efforts of some of the compilers of digests to compromise the matter in order to obey the clear directions of the Smrītis. In the legal schools, again, it has been found necessary to assign relative weight to Purāṇas and Smrītis, a distinction which is not found in Kumārila, who accepts the Purāṇas on the same basis as the Smrītis. In the case of a divergence between Smrīti and Purāṇa the former should prevail in the view of Vyāsa; the Purāṇa represents no more than custom, while the Smrīti is a step nearer to Śruti.

While the Mīmāṁsā thus stands in close relation with Indian law, in its enunciation of principles in the form of brief maxims (nyāya), comparable with the headnotes of modern law reports, it stands in equally close relation with the popular vogue of maxims3 framed on the model whence the Mīmāṁsā use is doubtless derived. Such popular maxims are freely cited by the text-books of the school, and it was presumably on their analogy that the Adhikarana headings were derived; the remarkable divergence of the commentators4 in allotting Sūtras to Adhikaranaś indicates that the latter were not a primitive constituent of the Sūtra text.

2 Tagore Law Lectures, 1905, pp. 234, 235; cf., however, Mandlik, op. cit. p. xxx.
